California Department of Food and Agriculture
State of California**

GOVERNOR GRAY DAVIS

Dear Friends:

You don't have to look far to see why California is in a class of its own when it comes to agriculture. With 350 crops and an agricultural economy that exceeds \$27 billion, the rest of the world looks to us to see what's next in agriculture.

What's our secret? The ideal climate and unsurpassed natural resources are a start, but it's our agricultural community's innovative approach to research, business and technology that has made California the nation's leader in food and fiber production.

In California, we're proud of our commitment to agriculture. In 2001, for example, the state approved the most expansive agricultural tax cuts in 30 years, saving farmers and ranchers millions of dollars in fuel and equipment costs over the next several years. When high energy prices threatened agriculture's bottom line, the state responded by providing nearly \$90 million in energy conservation incentives. And the "Buy California" program will prove to be one of our greatest cooperative achievements yet by boosting consumer demand for the highest quality, safest agricultural products in the world.

This resource directory is more than a listing of names and numbers; it represents the network of people and organizations dedicated to making our farmers and ranchers the best in the world. I hope you find it a useful tool for learning more about California's exceptional agricultural community.

Sincerely,

Gray Davis

FOREWORD

Anyone familiar with agriculture knows that the profession is no stranger to adversity. It seems that every farmer or rancher can recount stories of hard times; tales of rock-bottom prices or disastrous weather are part of what make farming not just an occupation but a lifestyle.

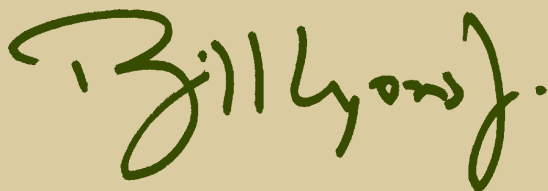

Those acquainted with agriculture also know that farmers and ranchers are resilient (by necessity, if not by nature). Through hard work, perseverance and innovation, California's agricultural community has overcome considerable obstacles while managing to produce the safest and most abundant food supply in the world.

The events of September 11, 2001 tested the resilience of all Americans, including our nation's farmers and ranchers. No segment of society was left untouched by the tragedy. For agriculture, the crisis temporarily grounded air shipments of perishable commodities and spurred increased vigilance against those who would deliberately harm agricultural production.

Despite all of these challenges, the men and women of California agriculture have shown incredible strength, determination and a sincere love for their country in this moment of crisis. They have offered up unwavering support to our president and governor. With their fellow Americans from all backgrounds, races and religions, the agricultural community has united against threats to our nation's security, democracy, way of life and food supply.

As a lifelong farmer and rancher, I have taken special pride in the unflagging patriotism of the men and women who work the land. When our leaders ask farmers and ranchers for their help, they will receive all that we have to give. California's agricultural community will be a source of great strength and resolve in the days and months ahead.

Sincerely,

A handwritten signature in dark ink, reading "Bill Lyons Jr." with a stylized flourish at the end.

William (Bill) J. Lyons Jr., Secretary
California Department of Food and Agriculture

CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE

Protecting California Agriculture's Bottom Line

The year 2001 was marked with immense challenges and timely opportunities for California agriculture. In response, lawmakers at both the state and federal levels worked hard this past legislative session to improve agriculture's bottom line.

As Governor Davis stated, "We're investing in farmers to keep California No. 1 in agriculture." For that reason, this year's state budget was the best for agriculture in a generation, and it also contained the largest tax cuts for agriculture since 1965.

The Golden State's commitment to its agricultural community remains strong. Special energy incentives, tax cuts, and additional funds to combat the glassy-winged sharpshooter and Pierce's disease are just a few examples of the commitment by the governor, state and federal lawmakers and the California Department of Food and Agriculture to protect and promote our state's bountiful harvest.

EMERGENCY AGRICULTURAL ASSISTANCE ACT OF 2001

The governor invested a total of \$500,000 in the coalition of five state departments of agriculture known as NFACT (New Mexico, Florida, Arizona, California and Texas). The NFACT mission, since its inception two years ago, has been to help diverse agricultural communities gain greater recognition at the federal level, most notably for specialty crops, livestock, poultry and aquaculture.

With the strength of NFACT's congressional representatives, in August 2001 Congress passed a new multi-billion dollar federal program. As part of this legislation, California will receive nearly \$64 million in a block grant to the California Department of Food and Agriculture. Throughout October 2001, the department hosted listening sessions with the aim of determining the best approach for use of these funds. The department was most interested in hearing from the men and women who are affected by agriculture's recent challenges—our state's farmers and ranchers.

*"Western Growers Association
and its members would like to
extend their heartfelt thanks
to you, Secretary Lyons and
Governor Davis, for your
ground-breaking efforts to
provide financial relief to a
sagging agriculture industry
and economy."*

*A.G. Kawamura, Chairman of
the Board, Western Growers
Association*

BUY CALIFORNIA CAMPAIGN

Despite California's rich agricultural bounty, studies indicate that only 27 percent of our residents eat the five daily servings of fresh fruits and vegetables recommended by leading health experts. To further promote consumption of California-grown agricultural products by California consumers, Governor Davis advanced a partnership between government and industry—the Buy California campaign.

The idea of a statewide marketing campaign began at the grassroots level and was thrust into the spotlight in 2001 as the governor and Legislature approved \$5 million in seed money. Then, at the governor's request, Congress approved additional federal funds.

By promoting California agriculture, the marketing campaign will communicate food safety, quality and state pride. The ultimate goal is to help persuade some 30 million Californians to choose homegrown fruits and vegetables when they shop.

SPECIAL TAX INCENTIVES FOR AGRICULTURE

We all know that staying in the black is not easy in agriculture. Assembly Bill 426, introduced by Assemblyman Dennis Cardoza and signed into law by Governor Davis, contains the most expansive tax cuts for agriculture in the past 30 years. In 2001 alone, this bill is worth more than \$50 million in state sales tax exemptions. Over the course of the next decade, this bill will mean hundreds of millions in savings for the agricultural industry. These tax cuts will spur equipment purchases, resulting in higher productivity and greater profitability.

\$24 million for tractors and parts

This provision gives a 5 percent tax break on tractors and parts. In real terms, if a farmer or rancher were to buy a \$100,000 piece of equipment, with the new tax break they would keep \$5,000 that would normally go to taxes. If a grower spends \$6,000 in spare parts each year, then \$300 that used to go to the state would stay on the farm and in the local community.

\$22 million tax relief for diesel fuel

On purchases of diesel fuel for farming and processing, this tax provision means that for a 1,000-gallon bulk tank fill up, the state will no longer take \$75 in sales tax. This equals a 5 percent tax exemption on diesel fuel purchases.

\$8.3 million in exemptions for propane

On purchases of propane, this allowance provides nearly 8 percent in tax savings. Here's an example: If a farmer or rancher were to fill up a 300-gallon household tank, then \$30 would be saved. If a producer had a 5,000-gallon tank for a food processing operation, then \$500 will go to help the bottom line.

\$1.6 million tax relief for horse racing breeding stock

The state of California first began to distribute horse racing funds for operational expenses and facility improvements to the network of California fairs in 1933. Today, a portion of horse racing revenues is allocated to California's county fairs and district agricultural associations through the department's Division of Fairs and Expositions. This sales and use tax exemption will not only benefit the California horse racing industry by encouraging more racing, but it will also help to increase revenues available to the state's 78 local fair organizations.

SPECIAL ENERGY INCENTIVES FOR AGRICULTURE

In the summer of 2001, the governor demanded that any major energy conservation bill must also meet the needs of agriculture. Senate Bill 5X offers state support for agricultural projects such as high-efficiency agricultural equipment and alternative fuels. These measures, plus several others included in the bill, will improve agriculture's energy efficiency and contribute to California's fight for energy independence.

Specifically, the governor targeted \$90 million in grants to the agricultural community for energy conservation projects.

GLASSY-WINGED SHARPSHOOTER

The governor committed more than \$20 million in state funds over the past two years toward the statewide effort to combat this pest and the disease-causing bacteria it spreads. His leadership has also prompted matching funds from the federal government for the control program as well as a \$7.14 million block grant to compensate affected growers for vine losses due to the glassy-winged sharpshooter and Pierce's disease.

The wine grape industry also came to the table with the passage of Assembly Bill 1394, introduced by Assembly Member Patricia Wiggins. This bill created the Pierce's Disease and Glassy-winged Sharpshooter Board to administer an annual assessment, paid by the industry. This assessment will fund research of integrated pest management and other sustainable

industry practices intended to prevent the further spread of plant-killing bacteria that cause Pierce's disease.

FOREIGN ANIMAL DISEASES

Despite a lean budget year, the administration committed \$1.4 million to shore up the state's defenses against foreign animal diseases such as foot-and-mouth and mad cow disease. The University of California at Davis estimates that the total cost to California and the United States could exceed \$13 billion if foot-and-mouth should become established here.

Governor Davis, California's congressional delegation and the California Department of Food and Agriculture are very sensitive to challenges facing agriculture in the 21st century. As indicated by these highlights of the 2001 legislative session, there is no doubt that the agricultural industry scored its biggest victory in decades.

State Board of Food and Agriculture

The California State Board of Food and Agriculture advises the governor and secretary on agricultural issues and consumer needs.

In 2001, the board considered various issues with important implications for California agriculture. Among these issues were the 2002 federal farm policy legislation; foot-and-mouth disease; World Trade Organization Ministerial in Doha, Qatar; priorities for the new federal specialty crop block grant funds; and an overview of how agriculture is portrayed in the media.

The board's 15 members are appointed by the governor and are carefully selected to represent a broad range of

agricultural commodities, a variety of geographic regions, and both the University of California and California State University academic systems.

Members of the board are residents of California and are specially qualified for service through expertise or experience in the following arenas: farm, business, economic, environmental, or consumer affairs. Members serve four-year terms without pay, and appointments do not require Senate confirmation.

The California State Board of Food and Agriculture meets the last Wednesday of every month at the California Department of Food and Agriculture's main auditorium, unless otherwise notified. The public and media are welcome to attend.

Members of the California Department of Food and Agriculture's executive team work in partnership with industry, academia and government to protect and promote our precious heritage and natural resource—agriculture. Seated in this picture is William (Bill) J. Lyons Jr., Secretary. Standing behind Secretary Lyons, from left to right, are Lourminia Sen, Ag/Environmental Science Advisor; Karen Manor, Special Assistant; and Helen Lopez, Special Assistant. Standing in the back row, from left to right, are Vanessa Arellano, Assistant Secretary; Elaine Trevino, Assistant Secretary; Valerie Brown, Deputy Secretary; Steve Lyle, Director of Public Affairs; Bob Wynn, Statewide Coordinator, Pierce's Disease Control Program; Chris Stevens, General Counsel; Dan Webb, Deputy Secretary; and Tad Bell, Undersecretary. Not pictured is Chris Wagaman, Deputy Secretary.

County Agricultural Commissioners and Sealers of Weights & Measures

The California Legislature first established the county agricultural commissioner system in 1881. Under the original act, the position was referred to as county horticultural commissioner and was charged with protecting and promoting horticultural interests of the state.

Since that time, not only has the name changed, but also the duties and responsibilities have greatly expanded. Today, the county agricultural commissioner and staff are local enforcement agents for the California Department of Food and Agriculture and the California Department of Pesticide Regulation.

County agricultural commissioners are licensed by the California Department of Food and Agriculture and are appointed by their respective county board of supervisors. Commissioners manage programs and agricultural enforcement activities at the county level as mandated by the California Food and Agricultural Code and California Business and Professions Code. Chief among these duties is public safety and protection of agriculture, consumers and the environment.

Pest prevention programs keep pests out of California by screening out-of-state shipments, provide early detection of infestations with the use of traps, and control pests that become established in localized areas of the state.

Enforcement of pesticide regulations protect the public and environment by educating pest control professionals, monitoring pesticide applications and worker safety, and testing for residues in harvested commodities.

Consumer protection entails regulating the quality of eggs, fresh fruits and vegetables; certifying production and regulating local farmers' markets; regulating organic producers; monitoring conditions of nursery products; and assuring the purity and viability of agricultural seed. Commissioners provide apiaary services upon request.

Commissioners prepare annual crop reports, and in the event of natural disasters they complete statistical crop damage assessments to assist with federal crop insurance claim reviews.

In addition to these important functions, most agricultural commissioners also serve as sealers of weights and measures. In this capacity, they perform regulatory testing of weighing and measuring devices. In order to carry out this charge, it is necessary to maintain certified standards that are traceable to the National Institute of Standards and Technology. Equity in the marketplace and protection of the public are accomplished by enforcing the accuracy of net content statements, specialized measurements, petroleum price advertising and weighmaster enforcement.

Accuracy of weights and measures has been important to all segments of society since ancient times. Today, just as then, a very high percentage of items bought and sold are done so by

quantity (weight, measure or count). As the impartial third party in every such transaction throughout the state, the sealer and their qualified inspectors help to ensure equity and fairness in the marketplace.

Some commissioners may also have the added responsibilities of air pollution control, underground storage tank inspections, hazardous materials programs, roadside weed management, domestic animal control, predatory wildlife management, as well as occasionally working on right-to-farm ordinances, and water quality and land use planning issues.

Nearly all of California's 58 counties have an agricultural commissioner and sealer of weights and measures. For contact information, refer to the directory section of this publication.

Framework for the Future of Agriculture

"NFACT gives our coalition the opportunity to express views and encourage bipartisan efforts to secure the future of agriculture. This is critical not only for those who work the land, but also for the millions of consumers around the world who rely on a dependable and affordable food supply."

*William (Bill) J. Lyons Jr., Secretary
California Department of Food and
Agriculture*

PROTECTING OUR AGRICULTURAL BOUNTY

Agriculture in the five states of New Mexico, Florida, Arizona, California and Texas (NFACT) is a large part of our nation's rich heritage and economy. Abundant agricultural resources in these states supported \$49 billion in cash receipts in 1999, representing 26 percent of the national total.

However, over the last decade the nation's agricultural communities have experienced difficult times. Farmers and ranchers must operate locally, but they compete globally. The result is a cost-price squeeze that is severely impacting their ability to stay in business.

The NFACT coalition is committed to protecting and promoting this bountiful harvest. Further, NFACT wants family farmers and ranchers to thrive and prosper, not just because they are an important source of economic growth, but also because they represent a way of life. They are a unique and indelible part of our national character. Helping our diverse agricultural communities to gain greater recognition at the federal level is the cornerstone of the NFACT mission.

IMPACTING NATIONAL AGRICULTURAL POLICY

As the 107th Congress, the Bush administration and U.S. Secretary of Agriculture, Ann Veneman, prepared to develop the 2002 farm policy, NFACT saw an opportunity to present national agricultural policy recommendations that would be both fair and inclusive. Each debate provides Congress and policymakers with an opportunity to reexamine federal farm policy, including issues as diverse as pest and disease exclusion, conservation and rural development.

In recognition of the long-term impacts that the next farm policy will have on the agricultural community, NFACT undertook a lengthy study of issues affecting agriculture through a series of listening sessions. Based on input from these forums, NFACT attempted to arrive at consensus on recommendations that will assist farmers, ranchers, consumers and rural residents.

The report generated by this effort, *NFACT: Framework for the Future of Agriculture*, illustrates our resolve to encourage a greater understanding of the agricultural community's needs. Specific recommendations are the result of a two-year process to bring the concerns of agricultural producers in the NFACT states to the table regarding national issues of importance. By bringing hundreds of farmers, ranchers and consumers together, NFACT produced a report that reflects the realities of agriculture today.

In mid-July 2001, *NFACT: Framework for the Future of Agriculture* was hand-delivered to members of Congress, officials within the Bush administration, and interested agricultural and environmental organizations. Briefings were held with the leadership of these groups to garner further support for the recommendations in five major areas of concern: animal and plant health; conservation; international and domestic marketing; research, extension and education; and risk management.

The U.S. House of Representatives' Committee on Agriculture held meetings to discuss specific policy initiatives for the farm legislation (HR 2646, Agricultural Act of 2001). Members of Congress from the NFACT states successfully advocated for several recommendations from the NFACT report. Two programs of particular note are reauthorization of the Market Access Program to \$200 million per year and expansion of the Environmental Quality Incentives Program from \$200 million to \$1.2 billion per year. (Further information regarding this legislation and its current status is available on the Internet at www.senate.gov/~agriculture or www.agriculture.house.gov.)

NFACT RECOMMENDATIONS

Striking at the fundamental question, NFACT asked, "What should be the federal government's role in farm policy?" A farm

or ranch, like any business, must have the ability to anticipate and meet the needs of its customers and demands of the marketplace. Government policies that provide farmers and ranchers with the tools to promote themselves will allow them to succeed. Thus, specific products grown to meet consumer tastes or targeted at a particular niche market, in some cases, will replace the fungible commodities of yesteryear. This entrepreneurial spirit, long a tradition in NFACT states, is increasingly part of agriculture nationwide.

Farm policy can foster this dynamic, market-oriented approach, or it can unintentionally inhibit its growth by clinging to policies that no longer assist farmers and ranchers. NFACT is looking toward Congress and the United States Department of Agriculture to help

farmers and ranchers adapt to an increasingly diverse international agricultural economy. Assistance in marketing, creation of a level playing field for international competition, tools to manage risk, and other market-based programs will enable producers to meet these challenges.

Regardless of the strategy, policymakers must ensure that they create flexible programs that meet the diverse needs of all agriculture. In sum, NFACT believes that government can play an important role in agriculture. NFACT also believes that producers will make sound business decisions. NFACT therefore advocates for comprehensive programs that support farmers and ranchers while protecting our agricultural community and environmental resources.

An executive summary of NFACT's specific farm policy recommendations—to bolster specialty crops, livestock, poultry and aquaculture—is available on the Internet at cdfa.ca.gov/nfact.

"As an organization comprised of 300,000 family farmers and ranchers from across the United States, the National Farmers Union shares NFACT's commitment to bringing into the national debate those issues of concern to the country's small farming communities."

*Tom Buis, Vice President
for Governmental Relations
National Farmers Union*

Progress in the International Fight Against Foot-and-Mouth Disease

When foot-and-mouth disease was diagnosed in the United Kingdom in February 2001, veterinarians from the California Department of Food and Agriculture were deployed to assist with its control and eradication. By the time it was diagnosed, the disease had probably been present in the United Kingdom for several weeks. It is thought to have spread throughout the country by the movement of animals that were incubating the disease, but not showing obvious clinical signs. The first veterinarians to arrive in the United Kingdom were met with an explosive disease situation that had taken the government completely by surprise.

At the height of the foot-and-mouth disease epidemic, authorities identified over 60 infected farms per day. At that time, the emphasis of disease control activities was rapid diagnosis, slaughter of infected and exposed animals, and carcass disposal. From its diagnosis to December 2001, nearly six million animals in the United Kingdom have been destroyed.

While the worst of the epidemic is now over, the disease has not yet been eradicated and continues to have a profound effect in the country. The current emphasis of disease control activities is aimed at restoring a normal state of affairs. Department veterinarians continue to provide important assistance in this area. Examples of the department's work includes surveillance to detect new cases of the disease, inspections and examinations to ensure that animals are free of disease before restrictions are lifted or licenses for movement are granted, blood tests to identify carrier animals, and attention that all national and international requirements are being met in preparation for the United Kingdom to regain its status as free of foot-and-mouth disease.

A total of 11 department veterinarians and one livestock inspector have completed a tour of duty in the United Kingdom. They participated in all phases of the epidemic, from the first response to the initial lifting of restrictions and beginnings of a return to normalcy. Department veterinarians have gained experience and knowledge that will prove invaluable to our mission of protecting animal health here in California.

CALIFORNIA'S RESPONSE TO FOREIGN ANIMAL DISEASE

The recent outbreak in Europe of foot-and-mouth disease dramatically demonstrates that a strong animal health infrastructure—as well as unprecedented interagency cooperation—plays a crucial role in protecting animal health, food safety, food security, consumer confidence and economic well being. Though this is an animal disease, its impacts can reach all citizens and shake the foundation of government policy and national economies.

Foot-and-mouth disease is considered the most highly communicable viral disease known. It causes severe mouth and foot blistering in cloven-hoofed animals, such as cattle, sheep, swine and deer. Though it is not a public health threat, it is widely feared due to its rapid spread and debilitating effects on stricken livestock. It can spread among animals and between farms in a matter of hours by direct contact and by movements of contaminated people, vehicles and equipment. Severe trade restrictions are placed on affected countries, because the disease can easily spread to unaffected countries by the movement of contaminated animals, meat or dairy products. These trade restrictions can be as devastating to the agricultural economy as the disease itself.

It is estimated that the current crisis in the United Kingdom will cost that country about £5 billion (\$7 billion) by the end of 2001. This cost includes the expense for slaughter, compensation for farmers, and the impact on tourism. This does not include the social and political costs, which have also been unsettling. If this disease were introduced into California's Central Valley, it is estimated that the total cost to California and the United States could exceed \$13 billion, according to a 1999 study by the Agricultural Issues Center of the University of California at Davis.

While this disease has dominated headlines around the world, there are many other animal diseases that would have similar devastating impacts on California. There are at least 15 internationally recognized, highly contagious animal diseases that can have serious socioeconomic or public health consequences and are of major importance for international trade. Thirteen of these diseases are currently foreign to the United States, making potential introduction even more devastating.

Recognizing the significant impact that a foreign animal disease outbreak presents to California, the department continues its long tradition of protecting the state's agriculture from disease. Although California faces increasing disease risks due to international travel and trade as well as intensive farming practices, the department has been able to leverage its resources through an excellent relationship with industry and the United States Department of Agriculture. A crucial new addition to this partnership is the Governor's Office of Emergency Services.

A striking lesson from the recent foot-and-mouth disease outbreak in the United Kingdom is that one department alone does not have the resources to coordinate eradication response efforts in the face of a catastrophic disease outbreak. The California Department of Food and Agriculture has frequently worked with other state agencies in the past, but in recent planning efforts has enjoyed unprecedented cooperation. The Office of Emergency Services has provided the platform to stimulate interagency planning and will provide the framework to coordinate a large-scale interagency response.

In April 2001, the "California Response to Foreign Animal Disease: A Multi-Agency, Statewide Plan for Response" was released to state government and elected officials. It outlines the unified command structure, critical issues for successful eradication of a foreign animal disease, expected state response to a large-scale outbreak, potential impacts of a catastrophic outbreak, and agencies that may be called on to respond.

Successful exclusion, or response if an outbreak occurs, will depend on seamless cooperation among federal, state, local and private interests. The department intends to continue to facilitate these cooperative preparedness efforts.

"The assistance provided by the California Department of Food and Agriculture will prove invaluable in our efforts to keep foot-and-mouth disease from gaining access to the U.S. and California. This is a shining example of the level of cooperation and stewardship that exists between our two agencies."

Helene R. Wright, California Plant Health Director Western Region, Plant Protection and Quarantine United States Department of Agriculture

STATE VETERINARIAN ASSISTS IN FEDERAL SAFEGUARD REVIEW

California's State Veterinarian, Dr. Richard Breitmeyer, recently spent 30 days in Washington, D.C., as a consultant to U.S. Secretary of Agriculture, Ann Veneman. His visit came about as part of a special request to Secretary Lyons from Secretary Veneman during the early months of the new Bush administration.

Dr. Breitmeyer advised both Secretary Veneman and Secretary Lyons on a daily basis regarding the challenges posed by the threat of foot-and-mouth disease.

Working closely with the management team at the United States Department of Agriculture, Dr. Breitmeyer facilitated meetings with state, industry and veterinary organizations to review the nation's current safeguards. Issues

included international exclusion methods, import/export policies, research and diagnostic needs, vaccination policies, and quarantine and response procedures.

"Producers and veterinarians will be the first to see any suspected foreign animal disease," stated Dr. Breitmeyer. "It is essential that state and federal agencies work closely with local veterinarians and livestock industry representatives to both prevent such animal disease outbreaks and respond rapidly should one occur."

FROM FAIRS TO FARMERS' MARKETS: DEVELOPING A SHOWCASE FOR CALIFORNIA AGRICULTURE

California's fertile soils and temperate climate may have created the ideal environment for agriculture to flourish into one of the state's major commercial sectors, but local community fairs, farmers' markets and creative marketers have promoted this growth, helping to make California the nation's leader in agricultural production.

Not long after California gained statehood in 1850, the Legislature created the California State Agricultural Society to hold an exhibition of livestock, manufacturers and production in 1854. The mission of these early fairs was to advance public knowledge of agriculture and provide facilities for community gatherings timed to coincide with the annual harvest celebration. Typically, these fairs included cattle shows and farm demonstrations to popularize new breeds of livestock and explain new methods of cultivation. Prizes and certificates of excellence were awarded to recognize the best farming practices and handiwork in a region.

Today, the network of California fairs is supported by the California Department of Food and Agriculture's Division of Fairs and Expositions, and the basic ingredient of showcasing agriculture, commerce, competition and celebration remains at the heart of this popular community event. In the following profile, "Making of a Great Fair," the California Exposition and State Fair's general manager, Norb Bartosik, is featured for his role in generating a spirit of celebration that honors family, community, cultural diversity and agriculture today.

Frieda Caplan, a leader in the produce industry for 40 years, is known for transforming specialty fruits and vegetables into staples of American kitchens. The savvy marketer has popularized everything from kiwifruit to alfalfa sprouts by showing shoppers how to incorporate fresh produce into their diets. The department's Buy California campaign works in much the same way. The aim of the

program is to boost consumption of California-grown products by promoting their outstanding quality, variety and flavor. The profile, "Changing the Way Californians Eat—and Farm"

describes Caplan's talents at creating markets for specialty crops and rare produce, and, in the process, altering our perception about something as fundamental as the food we eat.

California's farmers gained the ability to sell their commodities through farmers' markets 25 years ago. With legislative authority, the California Department of Food and Agriculture developed regulations putting the direct marketing program into place. Today, most farmers' markets have waiting lists of both farmers and vendors wanting to break into this very popular venue. And, no wonder. Stroll around any farmers' market and it is quickly apparent that they have broad community appeal and offer a cornucopia of fresh produce and exciting new food products. For example, at the Torrance Certified Farmers' Market you can buy fresh, tree-ripened peaches, sample spicy mango chutney and go home with novel Apriums.

The person responsible for making the market run smoothly is the market manager. The world of a farmers' market manager involves many functions—they act as recruiters, marketers and, perhaps most important of all, the thin blue line of enforcement that keeps markets from being overrun by those who would take advantage of the system. In the profile, "A Day in the Life of a Farmers' Market Manager," follow along with Mary Lou Weiss, Manager of the Torrance Farmers' Market. Of the many factors that determine the quality and integrity of a farmers' market, none outweighs the influence of its manager.

Each of the three individuals featured in the profiles to follow have truly found their niche in the world of agricultural promotion.

The Making of a Great Fair

NORBERT J. BARTOSIK
GENERAL MANAGER/CEO
CALIFORNIA EXPOSITION AND STATE FAIR

Never in his wildest dreams did Norb Bartosik think he would spend his entire professional life in the fair business.

As a young boy growing up in Chicago, Bartosik barely knew about the magic of a fair. Other than the occasional street festival his family would attend in the city, Bartosik was a neophyte to fair fever. However, the thrill that accompanies the sights, sounds and smells of these summer celebrations was soon to capture his imagination.

He had just graduated from Southern Illinois University with a degree in finance when he landed his first job at the DuQuoin State Fair. For Bartosik, he simply felt pleased just to try out this new thing called "employment."

Bartosik's larger than life persona and endearing personality quickly matched his outstanding administrative skills. Before he knew it, his career in the fair and exposition industry was launched.

With each subsequent position at DuQuoin, Antelope Valley Fair and the Orange County Fair, the proof was there—he had a real understanding of the function of fairs and what drives the public to attend year after year.

In 1994, Bartosik was appointed to the position of general manager of the California Exposition and State Fair. His first task was to build upon the successes of his predecessors by bringing a new sense of creativity, energy and spirit to this annual event, which had been founded in 1854 by early agriculturalists in the Golden State.

For the past seven years, Bartosik has worked hard to develop a management team with the vision and talent to match his goals. He is the first person to recognize that his job would not be possible were it not for a small team of managers who orchestrate all events and activities staged year-round at the 365-acre site known as Cal Expo.

Bartosik aspires to the notion that bigger is not always better. Together with his management team, he is committed to

improving the quality and value of programming and making sure that the fair truly mirrors the melting pot society it is meant to represent.

Over the years, exhibits have changed with the times and cultural elements have been added to the traditional agricultural roots of the fair. For those who question the relevancy of agriculture at the summer event, Bartosik is quick to answer that the state fair has a real responsibility to continue to showcase one of the state's major industries: our bountiful agricultural harvest of 350 different commodities.

As our society has become more technical and less agrarian, the challenge is to continue to develop contemporary programs that increase our understanding of food production and encourage healthy lifestyle choices. For most visitors to the California State Fair, there are constant reminders of the state's commitment to produce the safest, most abundant and wholesome food in the world.

Through Bartosik's vision, the California State Fair has also expanded to include a celebration of family, community and cultural diversity. Both the fair and Bartosik have received many awards for innovative programs designed to educate and entertain and, in some instances, raise the standards of competition.

Bartosik sees the need for further fair enhancements to include international

participation, featuring commercial, educational and entertainment aspects. He believes that California is a nation state and the fair should reflect this reality.

With a 31 year-old facility to maintain, Bartosik and his team are working hard to develop a master plan to address needed capital improvements and increase participation of future fairgoers. Bartosik predicts Cal Expo operations will exceed \$50 million within the next ten years.

Bartosik recently said, "No one loves the fair more than I; it simply gets into your blood. The most depressing day in the office is the day after the fair closes. I just hate to look around and see the treasures left behind from the last 18 days of BIG FUN, knowing that the magic won't come around again for another year."

PROFILE

Bartosik's management team orchestrates all the events and activities staged year-round at the 365-acre site known as Cal Expo.

Pictured from left to right, back row first, are Norb Bartosik, General Manager/CEO; Dave Elliot, Assistant General Manager for Racing; Brian May, Assistant General Manager for Administration; Mike Bradley, Assistant General Manager for Competitive Programs; Ray Malerbi, Assistant General Manager for Expo Events; Don Hillman, Deputy General Manager; Jan Risso, Administration Program Analyst; Sally Ash, Assistant General Manager for Marketing.

Changing the Way Californians Eat—and Farm

FRIEDA CAPLAN
FOUNDER AND CHAIRMAN OF THE BOARD
FRIEDA'S, INC.

You're more likely to find her in an office than an orchard, but Frieda Caplan's contribution to California agriculture is indisputable.

"She's the bellwether of the produce industry," says California Vegetable Specialties founder Richard Collins, who grows endive in Rio Vista. "She was almost in the right place at the wrong time, she was so ahead of her time."

The founder and chairman of the board of Frieda's, Inc., Caplan is credited with revolutionizing the world of specialty crops with her marketing savvy and knack for picking a winner.

Ever hear of kiwifruit? How about spaghetti squash? Or alfalfa sprouts? Caplan helped pluck these and many other items out of obscurity and usher them into America's kitchens. Moreover, she created a haven for growers of specialty crops who could not find a produce dealer to market their rare produce.

Growers themselves attest to Caplan's talent at creating markets that were seemingly nonexistent. "Frieda was and still is the type who will go out and create orders," explains Collins. "This definitely was not the norm in the industry."

Though her long career has been defined by hard work and persistence, Caplan's entry into produce marketing was largely happenstance. She founded the wholesale produce company in 1962 after working for several years as a bookkeeper in a produce business operated by her husband's aunt and uncle. It was there that Caplan observed that California brown mushrooms—then considered a specialty item—were lingering in their baskets while imported canned mushrooms seemed to be flying off the shelves. Caplan was determined to find buyers for the fresh mushrooms and, after a lot of convincing, she did.

Eventually the management of the Southern Pacific Railway, which at the time owned the Los Angeles wholesale produce market, caught wind of Caplan's talent and offered to lease a space to her. With a \$10,000 loan and no experience in running a business, Caplan dove in head first, egged on by California mushroom growers who were looking for a leader to expand the market for their product. Today, fresh mushrooms are consistently among the top sellers in supermarkets across the country.

Shortly after Frieda's opened, Caplan stumbled upon the hallmark item that would eventually secure her station as a major player in the produce industry. A retailer asked Caplan what she knew about the Chinese gooseberry. Caplan had never heard of the fruit, but was instantly curious. Weeks later a produce broker approached Caplan, eager to sell a new fruit available from New Zealand: the Chinese gooseberry. Frieda's bought all that he had.

PROFILE

Frieda Caplan (left), along with daughters Karen Caplan (center) and Jackie Caplan Wiggins, continues to revolutionize the produce industry by generating new market opportunities for growers of specialty fruits and vegetables.

Not surprisingly, the brown fuzzy fruit was not an instant hit with consumers. In fact, it took Caplan four months to sell the first 2,400-lb shipment. The name didn't exactly help. Frieda suggested to the New Zealand growers that they rename the egg-shaped fruit "kiwifruit" in honor of the national bird the fruit resembled, the kiwi. The name caught on and a new market was born for this exotic fruit from down under.

The kiwifruit story doesn't end there, however. California growers were eager to break into the market and by 1970 they had done so, selling the entire first harvest to Frieda's. By 1980, the California Kiwifruit Commission was established, and today California grows 95 percent of the 8,000 or so acres of kiwifruit produced in the United States.

For Caplan, the kiwifruit example illustrates how imports can sometimes spur a thriving domestic industry.

"We were able to encourage

California growers to plant kiwi because of the market we created for them," says Caplan.

So how do you get the public interested in specialty produce, anyway? "The key to our success is communication, teaching consumers how to use the produce, how to cook with it," explains Caplan. Frieda's was one of the first companies to attach a brand name to fresh produce, and today uses things like recipes, labels and packaging to entice shoppers to try something new.

Dubbed "the company that changes the way America eats," Frieda's has a simple litmus test for what products it will take on. "The very first requirement is good taste," says Caplan.

Growth of the Los Alamitos-based company, which boasts \$35 million in annual sales and an 81,000 square-foot warehouse, has been largely from California. Caplan attributes this to the innovative spirit of California growers—and the outstanding research available to them.

So what's next on the menu at Frieda's? It's hard to know, but it's sure to bring new opportunities to California growers. "There's no place in the world that does what we do," says Caplan.

A Day in the Life of a Farmers' Market Manager

**MARY LOU WEISS, MANAGER
TORRANCE CERTIFIED FARMERS' MARKET
EVERY TUESDAY AND SATURDAY AT THE
CHARLES H. WILSON PARK**

A typical day for Mary Lou Weiss, market manager for the Torrance Certified Farmers' Market gets underway at 5:45 a.m. However, by that time, any number of farmers may already have set up their produce stalls and could be catching a quick nap before the market opens. They may need these few extra minutes of sleep. The growers come from all over California, and it's not unusual for them to leave home as early as 12:00 a.m.

Certified farmers' markets operate on the general principle of offering fresh food that has been grown or produced by the people selling it, making them extremely popular venues for small growers to sell directly to the public. Overseeing the market's operations is the job of a market manager who works to ensure that it conducts business according to existing laws and regulations.

As the manager, Weiss has likened the on-site logistics of a farmers' market to putting together a big jigsaw puzzle. Since the Tuesday market's opening in 1985, the number of growers has increased over the years from 20 to 65. The Saturday market also averages 65 producers. This means that space is always at a premium, and Weiss must work to ensure that all of the farmers and vendors can be accommodated.

More than a place where goods are bought and sold: Farmers' markets throughout California are also community gathering places where family, friends and neighbors come together for top quality produce and the chance to relax in a friendly atmosphere. Visitors may spend their time "grazing" their way through the market as they sample new and interesting food items. The Torrance market is so popular that on Tuesday it averages between 2,000 and 3,000 people, while on Saturday it may have as many as 6,000 to 8,000 loyal shoppers.

Once the market opens at 8:00 a.m., Weiss' job is to make sure that all farmers have their certificates posted. Each producer's certificate indicates the commodities they are allowed to sell. These certificates are obtained through an annual inspection by county agricultural commissioners, who verify that products sold are truly grown by the individual producer.

Most often, farmers will sell vine-ripened fruit, fresh-picked vegetables, heirloom varieties, or organically grown produce—all treasures that are otherwise hard to find.

Occasionally, the manager's job takes on an enforcement role if a farmer is caught selling something other than certified produce. Such a situation is infrequent, but, when it does happen, the illicit produce can include anything from Turkish dried apricots to packinghouse culls purchased from a commercial packer. Enforcement is the toughest part of any manager's job, but it is the only way to maintain the market's

integrity. This may result in the filing of a complaint with state and county agricultural authorities. However, it can also lead to removal of the farmer from the market.

The highpoint of the Tuesday market is a raffle that Weiss conducts at 12:00 p.m. She and her volunteers go from farmer to farmer to collect at least 55 bags of produce, which is raffled off. The chance to win fresh and delicious produce and other food items makes the raffle a well-attended and popular feature of the Torrance farmers' market.

After the raffle, a local nonprofit organization—Shared Bread—arrives to collect produce that farmers may wish to donate. The farmers have supported Shared Bread for more than nine years, giving back to the local community by helping to feed the homeless.

Schools win, too: Groups of school children often visit the market, giving them a first-hand glimpse of new or

unique produce and a chance to meet the men and women who grow it. The visits are arranged so that students learn more about where their food comes from and gain a greater appreciation for produce of all types and varieties.

By 1:00 p.m., the market begins to empty and farmers are ready to travel home, or to another market. Weiss' job is not finished, though, because farmers must pay the market sponsor a fee to cover common expenses. The fee is usually based on a percent of sales, and in this case goes to the Parks & Recreation Department for the City of Torrance. Weiss collects this fee and maintains financial records for the department.

Nine hours later, Weiss is heading home. What is the favorite part of her job? It isn't the access to fantastic produce, or the business aspects of the market. Instead, she loves the chance to work with farmers who are passionate about what they do. In her own words, "What more could you ask for?"

PROFILE

Mary Lou Weiss enjoys working with farmers because they are passionate about bringing to market heirloom varieties and unique produce, all grown with great care and attention.

PUBLIC OUTREACH AND COMMUNICATION

Cooperation is Key to Success with Pierce's Disease and Glassy-winged Sharpshooter

California growers and consumers are encouraged by the progress of a cooperative, statewide Pierce's Disease Control Program overseen by the California Department of Food and Agriculture to control spread of the glassy-winged sharpshooter and the disease-inducing bacteria it spreads. Grapevines, almond and peach trees, oleander bushes and even alfalfa stalks are among the hundreds of plants on the hit list for this pest and disease combination.

In a nutshell, the problem is fairly simple. Grape growers and other farmers in California have spent decades learning to deal with Pierce's disease and similar plant ailments, but are now faced with the arrival of a non-native insect, the glassy-winged sharpshooter, that is capable of spreading the disease-causing bacteria with more deadly efficiency. This insect is, as Governor Davis puts it, "proof that big problems come in small packages."

ONE YEAR AGO...

In 2000, as California agriculture was coming to grips with the threat of this pest-disease combination, tension was running high. The scientific store of knowledge about Pierce's disease and the glassy-winged sharpshooter was insufficient, the incidence of Pierce's disease in infested vineyards was on the rise, and no one knew just how far the problem had advanced in the years before scientists and growers determined the nature of this threat. While 12 months is far too little time for the scientific community to cure Pierce's disease, the past year has nevertheless yielded plenty of promising ideas and incremental successes.

"Every new program is a challenge," said the Pierce's Disease Control Program Statewide Coordinator, Bob Wynn. "But this challenge has been exceptional. We had to assemble an experienced staff and compose a strict-but-fair regulatory program at the drop of a hat, in a situation charged with high stakes, serious environmental concerns, no room for error, and no time to waste. We certainly aren't done yet, but I'd have to say that we have gotten off to a promising start."

*Pierce's Disease Control Program:
"Congratulations for pulling
together a fine staff, and
coordinating activities with
local, state, university, industry
and federal participants. Never
have I seen such success in
bringing together the diverse
interests of stakeholders to
make a complex program such
as this a reality."*

*David R. Whitmer, President
California Agricultural
Commissioners & Sealers
Association*

A PROMISING START

Nobody likes a pest. Perhaps that's why so much support has formed behind this statewide program to control the spread of a pest that, left to its own devices, could spread deadly plant diseases to several crops for which California is famous—crops that simply aren't grown as well or as plentifully elsewhere. Great grapes? Yes. But California also produces 99 percent of the nation's almond harvest—another crop that can contract a deadly disease from the bacteria borne by sharpshooters. Then there are the peaches, plums, oranges, lemons and limes in our

orchards, the oleander along our highway medians, and even the alfalfa that is a staple for so many other segments of California agriculture.

"This is a complex situation and it will take a sustained effort by a broad array of allies in the agricultural community to see it through," said Secretary Lyons.

As the 2001 harvest wound down and California agriculture took stock of its situation, the unanimous declaration about Pierce's disease and the glassy-winged sharpshooter was, "We're gaining ground." No, the problem is not resolved, but important lessons were learned and the initial crisis had been averted. Various stakeholders have put this urgent problem under a microscope and the discoveries, refinements and data from the past year are beginning to produce results.

DEVELOPMENTS AND DISCOVERIES

Kern County Experiment

A year ago, the land that is now the Kern County Pilot Project looked like any other swath of California's agricultural heartland. Today, it is a 13,000-acre, open-air laboratory where various crops are dotted with insect traps, tracking the migration and density of the local glassy-winged sharpshooter colony.

Crop protection treatments, parasite releases, organic applications and a handful of other methods are conducted and reviewed on-site, and the lessons learned among the rows of plants, trees and windbreaks are already leading to solid advice for farmers. Pierce's disease has been detected in vineyards in the project area, so scientists and growers are taking advantage of the opportunity to learn more about detection of disease symptoms, gauge the susceptibility of vine varieties, and anticipate future spread of the disease.

The pilot project is a cooperative effort led by the United States Department of Agriculture and involving the California Department of Food and Agriculture, University of California Cooperative Extension, the Kern County Agricultural Commissioner and various other agencies and industry groups.

Temecula on the Rebound

Grape growers and their neighbors in the Riverside County area of Temecula got quite a shock a few years ago when their vines became the first victims of the glassy-winged sharpshooter and Pierce's disease. Reports of doom and gloom rang throughout the media, but this year's harvest sounds a decidedly more positive note. Growers in the area have not eliminated the population of sharpshooters there, nor have they seen the last of Pierce's disease. But, they are learning to live with the problem by cooperatively managing treatments, trapping and surveys to minimize their losses.

Industry Support

In summer 2001, Governor Davis signed grower-sponsored legislation authored by Assembly Member Patricia Wiggins to assess the wine industry approximately \$5 million annually for the next five years to augment public funds already dedicated to research and other measures against the pest and disease. The infusion of private funds certainly bolsters the program's research and containment efforts, and it also assures that the finest scientific minds available will continue to dedicate their efforts to this program.

Battle of the Bugs

Over the past 12 months, the department has released over 100,000 tiny, stingerless, parasitic wasps that are natural enemies of the sharpshooter. Although these wasps cannot single-handedly eradicate the sharpshooters, they can help restore the kind of natural balance that produces markedly lower numbers of sharpshooters. Researchers have also determined that the wasps can be safely released in areas that have been treated with a systemic pesticide, which is applied to the soil and soaked up by a plant's root system. Due to concerns that the pesticides might kill these "beneficial insects," previous wasp releases were confined to areas where no pesticide treatments had been applied. This discovery allows more complete control of the sharpshooter.

WHERE IS THE FINISH LINE?

The long-term goal is to find a treatment or cure for the disease. Of course, that will take time. The short-term goal, therefore, is to minimize the spread of sharpshooters. The department, along with its federal counterparts, county agricultural commissioners, industry members and researchers, has led the effort to keep the bug at bay and to support research efforts.

"We have treated local infestations in a handful of Northern California communities, with promising results," said Wynn. "We and our partners have funded over 50 research projects to solve the puzzle of Pierce's disease and to identify new tools that we can use against the sharpshooter. We have also instituted a comprehensive program of plant and fruit shipment inspections to make sure we are not transporting this troublemaker on agricultural commodities trucked around the state."

The Pierce's Disease Control Program has gained ground in the battle against a pest-disease combination that Secretary Lyons terms "the most significant threat to California agriculture in the last 20 years." The struggle to contain the spread of the glassy-winged sharpshooter and to solve the

problem of Pierce's disease will likely take years to complete, but the past 12 months have given growers and consumers reason to believe that this is a battle we can win.

Partnership to Rid California of the Red Imported Fire Ant

A successful public education campaign over the last two-and-a-half years has alerted millions of Californians to the presence of tiny, ferocious red imported fire ants, which are believed to have hitchhiked into the state in 1998.

The California Department of Food and Agriculture is taking the lead on education and eradication with a plan to stop red imported fire ants from taking up long-term residency, as they have done in 11 Southeastern states and a number of foreign countries.

PARTNERSHIPS PROVING EFFECTIVE

In each infested area of the state, department experts have provided training on the best methods to treat outbreaks and helped local government agencies to develop their own eradication plans. These local agencies are reporting significant progress in their efforts to keep the pest from spreading and have been successful in eradicating red imported fire ants from many heavily infested neighborhoods. Ultimate success may depend, in part, on help from local residents.

WHAT CAN CALIFORNIANS DO?

Keep an eye out for ant mounds inhabited by ants that appear to act more aggressively than those usually found in California. Red imported fire ant mounds often look like small piles of loose dirt with small, visible entrance holes. The mounds are usually found in open, sunny areas such as lawns, parks, pastures and fields. Mounds may sometimes be found under pavement, around trees or logs, or along curbsides. The ants are attracted to electrical boxes of all types and are often packed inside these containers. The ants are also known to get into laundry rooms of apartments and homes, especially when water is scarce.

Red imported fire ants range in size from 1/8 of an inch to 1/4 of an inch. They are reddish-brown and their abdomen section, located at the back of the body, will often be very dark brown, almost black in appearance.

Always report a stinging incident or suspected ant mound by calling 1-888-4FIREANT (1-888-434-7326). The hotline has recorded information about red imported fire ants and other unwelcome exotic pests.

HOW CAN TINY ANTS BE CONSIDERED FEROCIOUS?

When any kind of vibration disturbs their mound, red imported fire ants will quickly swarm out and crawl up the leg or arm of the perceived intruder, stinging repeatedly. The ants are called "fire ants" because their sting feels like a burn. The sting areas will swell, redden, and then itch within a period of an hour or so. Within 10 to 12 hours, itchy pus-filled blisters will emerge. The protein in red imported fire ant venom may lead to an allergic reaction in a small number of victims. That reaction is characterized by shortness of breath, sweating and swelling.

WHAT TO DO IF YOU'RE STUNG

- If you suspect an allergic reaction seek medical attention immediately.
- Wash the affected area with soap and water to prevent infection.
- Elevate the area of the body that was stung and apply ice or a cold compress to reduce swelling and relieve pain and itching.
- Keep blisters clean and avoid scratching to reduce the chance of infection and scarring.
- Call the department's toll-free number at 1-888-434-7326 to report the incident.

WHERE ARE THEY?

Red imported fire ant infestations are being treated in Fresno, Los Angeles, Madera, Merced, Orange, Riverside, Sacramento, San Bernardino, San Diego and Stanislaus counties. The heaviest infestations are located in Orange and Los Angeles counties and throughout the Coachella Valley area of Riverside County.

RED IMPORTED FIRE ANTS, AGRICULTURE AND THE ENVIRONMENT

The ants can attack agricultural workers, devour important crops, and their mounds can damage farm equipment. The ants attack horses, baby calves and other livestock. The ants can kill wildlife such as quail, lizards, squirrels and baby deer.

Additional information about red imported fire ants can be found on the Internet at www.fireant.ca.gov.

Flex Your Power

In 2001, California faced the worst energy crisis in its history. With electricity supplies dangerously short, our state prepared for a doomsday scenario. Dozens of hours in blackouts were projected for the summer of 2001. Commercial and residential consumers up and down the state—including agricultural users—prepared for the worst, analyzing how they might cope with random losses of service. As the summer months drew closer, the outlook appeared bleak.

In the meantime, Governor Davis led his administration in a fierce charge. Through the multi-faceted approach of stabilization, generation and conservation, the governor laid out a shrewd strategy to attack the problem while minimizing damage. As troubled utilities stabilized and generation capacity increased, the conservation message was delivered to every corner of California. And as summer gave way to fall, it was clear that doomsday was on holiday. The season passed without a single rotating blackout. While Mother Nature certainly deserves a share of the credit—it was a relatively mild summer—millions of Californians shared in the success by heeding the clarion call and dramatically reducing electricity usage.

The California Department of Food and Agriculture saw opportunity at its fairs. By organizing a public-private partnership, the department spread the conservation message at four of the state's largest fairs, reaching nearly 4 million people with the traveling Flex Your Power booth. The do-it-yourself home store, Home Depot, joined the campaign with an assortment of energy-efficient products. The California Conservation Corps provided personnel to distribute conservation brochures and take fairgoers on tours of the Flex Your Power Web site. And, the department relied on the considerable expertise at the California State Fair, Orange County Fair, Los Angeles County Fair and Big Fresno Fair to develop high visibility booths in heavy traffic areas.

Governor Davis came out to see for himself, paying a visit to the California State Fair and spending time in the Flex Your Power booth. California First Lady Sharon Davis visited, too, spending a considerable amount of time talking with fairgoers as well as Home Depot and Conservation Corps personnel.

With a network of 78 fairs around the state, the department takes advantage of many opportunities to reach out to Californians in their communities. The Flex Your Power booth achieved that by encouraging people to conserve one of our most crucial resources. A lot of them took the message to heart.

PROGRAMS AND SERVICES

Agricultural Export Program

The California Legislature declared, upon establishing the Agricultural Export Program within the California Department of Food and Agriculture, that “the State’s agricultural economy is dependent upon international trade.” The Legislature further declared “it is in the public’s best interest to assist California agriculture in market development for agricultural products, and to expand world trade in these products to maximize growth in the State’s economy.” All activities of the Agricultural Export Program are guided by these principles—to assist California’s agricultural producers in foreign market development, leading to increased world trade of our agricultural products.

The Agricultural Export Program prides itself on dedication to customer service. The program offers services valuable to both the novice and experienced exporter in pursuing their international sales and marketing efforts. Simply stated: If we cannot help a company to overcome its export-related problem, then we will find someone who can. The program’s mission is to foster growth of California exports of food and agricultural products by creating and expanding global market opportunities.

TRADE DEVELOPMENT

The Agricultural Export Program annually sponsors dozens of trade development activities designed to penetrate new markets or expand opportunities in existing ones. Although the program’s trade development activities can take many forms, some of the standard ones include sponsoring “California Pavilions” at international food shows, arranging meetings and educational tours for foreign buyer missions visiting California to source new products, arranging California-themed in-store or restaurant promotions, and creating promotional and educational materials that highlight California products and producers.

Buying Missions

California is a desirable destination for buying teams coming to the United States. Normally, these buyers are seeking new products to import into their country, and they realize that California, which produces the most diverse array of food products found anywhere in the world, is their best bet for finding new items.

Tabletop show format where foreign buyers meet face to face with California exporters.

The Agricultural Export Program will arrange meetings between visiting buyers and California exporters, often in the form of a “tabletop show”—a venue where California suppliers can come together at a central location to display their products to foreign buyers. Additionally, if buyers want to know where and how specific food items are produced, the program will arrange educational tours of farms and processing facilities.

Spotlight: The following comments were made by California suppliers after participating in a buying mission held in California:

“This is a vital tool in expanding markets for small companies in California.”

SunRidge Farms

“Excellent coordination.”
Sam’s Club

“Very high quality of buyers from four countries represented. We had ample time with each buyer.”

C.F. Brennan & Co.

“Always pleased with the quality of foreign buyers!”
Super Store Industries

Buying missions give California’s food, agriculture and beverage companies—whether they are small-, medium- or large-budget operations—an opportunity to meet face-to-face with visiting foreign buyers. Visiting buyers come from mature as well as emerging markets, including Japan, Hong Kong, Korea, Singapore, Malaysia, Indonesia, Taiwan, Mexico, Argentina, Chile, France and Sweden.

These buying missions are organized in cooperation with the United States Department of Agriculture's Foreign Agricultural Service along with other federal, regional and state trade agencies. Buying missions consist of foreign buyers organized for the purpose of learning about California food and agriculture. The aim is to facilitate the development of excellent trade contacts for buyers and sellers throughout California, resulting in significant export sales.

Tradeshows

California is well-known to people worldwide. In general, foreign consumers have very positive associations with the state. The Agricultural Export Program uses the "California" brand name to unite individual exporters under a common identifier. This positive image is also associated with the California Pavilions at international food shows. These pavilions vary in size from five to 35 participants, depending upon the popularity of the individual food show. The Agricultural Export Program normally sponsors from five to seven pavilions each year. Participation in a California Pavilion can reap large rewards for companies and can often be the best introduction to a particular foreign market.

California – Taste the Sunshine™ Promotional Campaign

Introduced by the Agricultural Export Program in 1997, the California – Taste the Sunshine™ promotional campaign provides a theme for promotional activities, materials and advertising. California exporters can use the trademarked logo on their products and packaging to increase consumer awareness. By

popularizing the California brand, the program helps to expand recognition of California as a source of a wide variety of high-quality food and fiber products.

INFORMATIONAL SERVICES

The Agricultural Export Program is dedicated to providing exporters with timely, accurate and reliable information. For questions regarding export certificates, tradeshows, agricultural statistics, market research, foreign country import requirements, or other general exporting questions, the program is ready to assist California's agricultural industry.

In April 2001, the Agricultural Export Program launched the new Internet-based Database of California Food and Agricultural Exporters. Inclusion in the database is free to California food and agricultural suppliers and is a valuable advertising opportunity.

STRATEGIC PARTNERSHIPS

The Agricultural Export Program maintains close relationships with various public and private entities that also provide specific assistance to California exporters. These resources range from other divisions of the California Department of Food and Agriculture, to officials of the United States Department of Agriculture, and to local trade providers, such as community college-based Centers for International Trade Development. The program plays a key role in representing California's interests

in international trade of food and agricultural products, acting as a conduit of information from the federal government to California's agricultural industry, and vice versa. In addition, as a founding member of the California Agricultural Export Team, the program works with other agencies to develop and coordinate services for individual companies and exporters.

NEED FURTHER EXPORT ASSISTANCE?

In addition to marketing services offered by the Agricultural Export Program, the department also offers the following.

Milk and Dairy Foods Control Branch

Provides export certification letters for dairy products.

Contact: Eliana Duenas (916) 654-0785

E-mail: eduenas@cdfa.ca.gov

California Export Laboratory Services

Provides certificates of chemical testing of food (raw and processed), agricultural products and beverages to exporters. Laboratory testing is done according to standards of the importing countries or as specified by exporters.

Contact: General Information (916) 262-1434

E-mail: cacels@cdfa.ca.gov

California Animal Health and Food Safety Laboratory System

Provides certification testing of domestic animals, commercial poultry and commercial salmonids for export. Laboratory services also include testing of raw and processed food animal products to meet established standards for food safety and wholesomeness.

Contact: Dr. Alex A. Ardans (530) 752-8709

E-mail: aardans@ucdavis.edu

Pest Exclusion Branch

Provides phytosanitary certification by plant regulatory officials in order to assist industry and consumers in meeting plant quarantine certification requirements of foreign countries, other states, or the state of California's interior quarantines. Exporters can receive phytosanitary export and import certificates from their local county agricultural commissioner's office (for contact information, refer to the directory section of this publication). Other inquiries can be directed to the department's Pest Exclusion Branch.

Contact: Steve Brown (916) 654-0312

E-mail: sbrown@cdfa.ca.gov

TRADE POLICY

Although all international trade treaties are negotiated between the federal government and foreign national governments, the Agricultural Export Program acts to educate federal authorities on issues important to California agriculture. When international trade problems arise, the program is there to assist exporters in navigating the sometimes complex regulations to gain market access. The program maintains close working relationships with federal trade officials at the Office of the United States Trade Representative and the United States Department of Agriculture.

For more information about these and other export services, visit the Agricultural Export Program Web site at www.export.cdfa.ca.gov.

Animal Health and Food Safety Services

California maintains one of the world's safest food supplies, thanks in large part to a food safety system based on strong, flexible, science-based regulations and a responsible, proactive industry.

As the division responsible for animal health and food production, Animal Health and Food Safety Services works to assure that California's animal agriculture products are safe, available and affordable. These goals are achieved by protecting public and animal health while enhancing stewardship of the environment. We strive always to be a step ahead—as the division's motto, this proactive mindset prepares inspectors, veterinarians, dairy foods specialists and other division staff for new challenges before they occur.

Animal Health and Food Safety Services comprises five programs: Animal Health, Meat and Poultry Inspection, Milk and Dairy Foods Control, Bureau of Livestock Identification, and the California Animal Health and Food Safety Laboratory System.

ANIMAL HEALTH

The Animal Health Branch prevents, detects, contains and eradicates emergency animal diseases through surveillance and control of the movement of animals and animal products as well as through regulation of veterinary biologics. Additionally, the branch is responsible for deterring misuse of drugs in horses entered into competitive events or sales as well as assisting in the control of wildlife and predatory animals. On-farm food safety issues are addressed through the Animal Production Food Safety Program.

Spotlight: Significant accomplishments include completion of statewide surveys for Salmonella in milk and eggs as well as further development and implementation of the Dairy, Beef and Egg Quality Assurance plans. In 2000, California maintained its brucellosis and tuberculosis free status, and for the last two years no new cases of swine pseudorabies have occurred in domestic swine. Control programs for Johne's disease, bovine trichomoniasis, and scrapie are currently being developed.

The Animal Health Branch conducts surveillance for new and emerging livestock and poultry diseases, including mad cow disease (bovine spongiform encephalopathy), West Nile virus and avian influenza. In 2001, several Animal Health Branch veterinarians assisted with the foot-and-mouth disease outbreak in the United Kingdom, and a multi-agency foreign animal disease emergency response plan was finalized for the state of California.

BUREAU OF LIVESTOCK IDENTIFICATION

The Bureau of Livestock Identification protects California cattle owners against loss of animals by theft or straying. The program is responsible for livestock brand registration; cattle inspection for lawful possession prior to transportation, sale or slaughter; and assistance to law enforcement on investigations and prosecutions involving cattle theft.

Spotlight: The bureau's headquarters office was reorganized to provide more efficient and professional service to our customers. Administrative functions have become 100 percent automated, allowing us to accelerate our processing time for brand applications, requests for records and detailed statistical reports.

Other significant accomplishments in the last 12 months include further development of a branch Web site that contains information regarding current contact information for brand inspectors, livestock laws, inspection requirements, electronic access to brand application forms, and the Road Enforcement Handbook. Additionally, the branch successfully resolved several major stolen cattle cases.

MEAT AND POULTRY INSPECTION BRANCH

The Meat and Poultry Inspection Branch provides oversight of establishments that are exempt from federal inspection to ensure that only wholesome, unadulterated, and properly labeled meat and poultry products are provided to consumers. The branch ensures that meat and poultry products not intended for human or pet consumption do not enter the food supply.

Spotlight: Significant accomplishments include developing regulations pertaining to the slaughter of fallow deer; collaborating with county health, zoning and law enforcement officials to address illegal slaughter and a broad spectrum of other illegal activities at specific sites; and working cooperatively with the rendering industry to address topics that could have potential impact on a wide range of public and animal health issues.

MILK AND DAIRY FOODS CONTROL

The Milk and Dairy Foods Control Branch ensures that milk, milk products and goods resembling milk products are safe, unadulterated, meet compositional requirements and are properly labeled. Branch staff provides inspection and sampling at dairy farms and milk processing plants and certifies dairy farms, milk plants and sources of single-service dairy containers. The branch also ensures that tests used to determine the basis for payment of milk or cream are accurate.

Spotlight: The California Milk Inspection Advisory Committee was reestablished to assist in administering statutory provisions regulating inspection services. The committee is tasked with an in-depth review of expenditures, revenues and services provided by the branch. This review is expected to lead to insightful recommendations as to how the branch should be funded and operated in the future.

The Investigative Services Unit within the branch was created to investigate illegal manufacture, distribution and sales of dairy products, particularly soft fresh cheeses. Dairy products by nature are susceptible to harmful human pathogenic organisms.

The unit works cooperatively throughout the state with allied agencies, such as the Department of Health Services, county public and environmental health departments, local code enforcement, county sheriffs, municipal police and other law enforcement agencies. The unit is also entering into a formal partnership agreement with the Import Operations Section of the Food and Drug Administration's San Francisco and Los Angeles district offices. Food safety is of utmost importance and is investigated earnestly.

The Environmental Stewardship/California Dairy Quality Assurance Program was identified and praised in the United States Environmental Protection Agency's Pacific Region's 2000 Annual Report. The quality assurance program continues to help dairy owners comply with state and federal clean water requirements. In conjunction with the University of California, the branch has trained six dairy foods specialists to respond to dairymen's requests for facility quality assurance evaluations.

This year, the branch issued more than 3,000 certifications for a variety of dairy products slated for export. This number represents a 240 percent increase over last year.

CALIFORNIA ANIMAL HEALTH AND FOOD SAFETY LABORATORY SYSTEM

The California Animal Health and Food Safety Laboratory System—administered by the School of Veterinary Medicine, University of California at Davis—provides reliable, timely and quality diagnostic laboratory support to the state's animal agriculture industries. It is the backbone of California's early warning system to help protect the health of the state's livestock and poultry populations—along with public health—from diseases common to animals and humans. It operates in partnership with the department, University of California, veterinarians, livestock and poultry producers, and the United States Department of Agriculture. The system comprises five laboratories: one on the Davis campus and four branch laboratories located in Turlock, Fresno, Tulare and San Bernardino.

Foot-and-Mouth Disease:

"The foresight and leadership that you and your staff demonstrated have begun to calm the fears and nerves of our state's livestock producers."

*Deirdre E. Flynn,
Executive Director
California Wool
Growers Association*

Fairs and Expositions

Agriculture plays an extremely important role in California's fair industry. Most of the state's fairs began as celebrations of their local agricultural harvest. Today, however, in their daily lives most fairgoers are rarely exposed to California's rich agricultural heritage. What local fairs offer are hands-on agricultural exhibits that give fairgoers a chance to learn and experience agriculture.

The Division of Fairs and Expositions supports these local efforts by providing oversight to the network of California fairs through the application of law, development and review of policies and procedures, and sound fiscal management.

Fairs and Expositions' oversight responsibilities include:

- Distributing state resources to local fairs for base allocations, general fair programs and funding, health and safety repairs, infrastructure improvements, training and education, and wagering facility improvements.
- Creating a framework for administration of the network of California fairs, allowing for a proper balance of local decision-making authority with state oversight.
- Supporting continuous improvement of programs to ensure that California's fairs remain highly relevant community institutions.
- Ensuring that annual fiscal audits and biennial compliance audits are performed.

CALIFORNIA FAIR NETWORK

The network of California fairs includes 78 active fair organizations that are divided into four categories: 52 active district agricultural associations, 23 county or non-profit fairs, two citrus fruit fairs and the California State Fair. For a complete listing of California's active fairs, refer to the directory section of this publication or visit the Division of Fairs and Expositions' Web site at www.cdfa.ca.gov/fe.

Fairs are a source of community pride, fostering common identity and loyalties across age and cultural boundaries. By mirroring the multicultural dimensions of their communities, California's fairs promote pride in the state's cultural diversity. These benefits are realized through the celebration of shared values and interests, contributing to social stability and promoting civic unity.

Annually, nearly 25 million people attend California's fairs and special events held in rural, suburban and urban settings. Local activities held at fairgrounds cover the spectrum from educational purposes to broad community services. A few examples

of the many valuable activities and programs that take place are field trips, Head Start programs, preschool programs, before- and after-school programs, agricultural education programs, weddings, cultural and arts events, concerts, shows, exhibits, livestock events and farmers' markets.

State and local government agencies utilize fairs as a way to disseminate vital information regarding the protection of California's natural, industrial and agricultural resources. The department regularly participates in local fairs to educate the public about important food and agricultural issues, such as eating more fruits and vegetables (5 A Day campaign), pest prevention (Don't Pack a Pest!), food safety and animal health. These public outreach efforts offer communities a closer view of California agriculture and the essential role of this \$27 billion-a-year industry.

Spotlight: During the 2001 fair season, the California Department of Food and Agriculture disseminated California's Flex Your Power energy conservation message at fairgrounds throughout the state in partnership with the Governor's Office; The Home Depot; California Technology, Trade and Commerce Agency; and California Conservation Corps. All those who visited the governor's energy conservation booth received important tips for increased home and business energy savings.

At the 2001 California State Fair, the department partnered with the United States Department of Agriculture, California State Fair and Monsanto to develop both a show and exhibit, "Quest for Food." This agricultural display gave fairgoers an opportunity to be educated and entertained by showing the challenges faced by farmers to bring wholesome, nutritious and quality foods to

consumers. In a much broader sense, all of California's fairs offer innovative educational opportunities that bolster and enrich their local communities.

Fairgrounds provide more than a location for educational, cultural and social interaction. They also provide the people of California with local facilities necessary for shelter during emergencies, such as earthquakes, floods, fires and other disasters. During these emergency situations, there is great cooperation between the department, the Office of Emergency Services and local fair organizations to provide safe haven as well as disaster preparedness.

Fairs also contribute to the strength of California's economy by generating approximately \$1.6 billion annually in economic activity. These economic activities include revenues received from fair admissions, food and ride concessions, exhibits, entertainment, horse racing and rental of fairground facilities.

In addition to employing approximately 810 permanent staff statewide, the arrival of a community fair acts as an economic accelerator by:

- Providing over 10,000 temporary jobs.
- Providing work experience to those in need of developing basic job skills.
- Generating an estimated \$8 million in state tax revenue from small businesses that sell goods and services at fairs.
- Generating funds for the local community to support a variety of charitable activities.
- Providing small businesses with an opportunity to display and sell merchandise and services.

FAIRS AND HORSE RACING

California's horse racing law, enacted in 1933, allows wagering at horse tracks as a way to generate public revenues. In the 1980s, new legislation authorized construction of satellite wagering facilities on fairgrounds and stipulated that a portion of revenues raised through such wagering would be returned to fairgrounds for facility maintenance and repair. California's 23 satellite-wagering facilities offer simulcast races from all of California's private and fair racetracks as well as national and international horse racing events. A portion of horse racing revenues is allocated to the network of California fairs.

"I want to personally thank you [Secretary Lyons] for your participation and support in making our 2001 Convention & Trade Show such an outstanding success. I believe the time you spent at the conference was unprecedented and greatly appreciated. It truly showed our members your interest and concern for our industry."

*Ciro L. Toma, President
Western Fairs Association*

Inspection Services

Inspection Services' mission is to ensure that the state's commercial supply of agricultural commodities, fertilizing materials, livestock feed and drug products are safe, wholesome and correctly labeled. Providing the highest degree of consumer protection and grading services is the first priority. Products entering the marketplace must therefore comply with standards for maturity, grade, size, weight, pack and labeling to prevent the sale of substandard commodities.

To accomplish this mission, the Division of Inspection Services comprises four branches: Agricultural Commodities and Regulatory Services; Center for Analytical Chemistry; Fruit, Vegetable and Egg Quality Control; and Shipping Point Inspection.

AGRICULTURAL COMMODITIES AND REGULATORY SERVICES

Feed and Livestock Drug Program

This program ensures that feed and livestock drugs are safe, effective and meet quality guarantees of the manufacturer.

Spotlight: Surveillance for foreign animal diseases that could be introduced into feed manufacturing facilities and then into our nation's food supply is of particular concern to state and federal agriculture officials.

To protect consumers from such diseases as mad cow disease (bovine spongiform encephalopathy), in 1997 the federal Food and Drug Administration prohibited use of protein derived from certain mammalian tissues in feed and animal products. Since 1998, the department has inspected all feed licensees for compliance with the federal feed rule. Mad cow disease has never been found in the United States.

California's feed manufacturing facilities have been found to be in compliance with requirements of the feed ban. To ensure continued compliance, and as part of a comprehensive feed safety inspection program, the department has contracted with the Food and Drug Administration to conduct additional inspections through 2002.

Fertilizer Program

The department's Fertilizer Program ensures that fertilizer products are safe, effective, registered, comply with specific labeling requirements of the California Code of Regulations and meet quality guarantees of the manufacturer.

Fertilizer Research and Education

This program works with growers, private businesses and public agencies to protect ground water from nitrate and other

nutrient contamination. Each year the program provides grants to conduct research and establish demonstration projects and educational programs.

Grain and Commodity Inspection

This program is designed to inspect and certify grains, rice, beans and other commodities in accordance with federal and state regulations. All inspectors, samplers and technicians are licensed by the federal government, which monitors licensed personnel to ensure uniform inspection.

CENTER FOR ANALYTICAL CHEMISTRY

The department's Center for Analytical Chemistry provides analysis of pesticide residues in fresh fruits and vegetables. In addition, chemical analysis for label compliance, quality, antibiotics residues, and various contaminants are performed on dairy products, animal feeds and fertilizer products. The center also operates California's Export Laboratory Services, which is designed to provide analytical services to agribusinesses that export commodities to international markets.

Spotlight: At the request of the California Pistachio Commission, the Center for Analytical Chemistry became certified as a United States Department of Agriculture accredited laboratory to test pistachios for aflatoxin. A potent carcinogen, aflatoxin is a naturally occurring fungus in tree nuts, peanuts, corn and cottonseed meal.

Foreign countries importing pistachios require that they be tested for aflatoxin prior to entry. The California Pistachio Marketing Agreement has committed to the trade principle of not offering open inshell pistachios or kernels for export to the European Union, Norway, Switzerland, Japan, Australia or New Zealand unless they have been tested.

The Center for Analytical Chemistry also tests almonds, corn and cottonseed for aflatoxin.

FRUIT, VEGETABLE AND EGG QUALITY CONTROL

This branch involves seven distinct program elements:

Avocado Certification

This certification program inspects avocados at the point of packing to ensure compliance with maturity, quality, size and weight standards.

California Organic Program

The California Organic Program enforces provisions of the law that govern sale of foods labeled as organic.

Direct Marketing

California's Direct Marketing Program enforces provisions of law governing the certification of producers and farmers' markets and the sale of agricultural products at farmers' markets.

Egg Quality Control

The Egg Quality Control Program ensures that healthful, wholesome and high-quality eggs are marketed in California.

Processing Tomato Inspection

The department's Processing Tomato Inspection unit provides training and oversight of a program that inspects processing tomatoes for defects, color and soluble solids or sugars.

Standardization

This program enforces and maintains minimum standards for quality, maturity, container, marketing size and packing requirements of California fruits and vegetables.

Wine Grape Inspection

California's Wine Grape Inspection program provides training and oversight in the inspection of wine grapes and by-products.

SHIPPING POINT INSPECTION

The Shipping Point Inspection Branch operates under a federal-state cooperative agreement with the United States Department of Agriculture. Under this agreement, department inspectors use federal grade standards for fruits, nuts and vegetables, as well

as issue federal-state inspection certificates. The branch makes available an optional third-party grading and certification service to the fruit, nut and vegetable industries at all points of origin and most receiving points in the state. It is also the official certifier of all commodities required to meet export specifications.

Spotlight: As a founding member of the Association of Fruit and Vegetable Inspection and Standardization Agencies, the Shipping Point Inspection Branch has been actively involved in developing national programs that enhance its ability to meet evolving industry needs.

One such endeavor is the recently approved National Auditing Alliance, established for the fresh produce industry to verify good handling and agricultural practices. The alliance was developed in response to industry requests for a national auditing package that was uniform and consistent.

In May 2000, a food safety subcommittee was founded under the auspices of the alliance. Gordon Poulsen, Program Supervisor with Shipping Point Inspection Branch, chaired the subcommittee, which met several times to refine various sections of the auditing program. In order to receive input from industry members, key commodity groups were consulted throughout the process. The United States Department of Agriculture approved the final program in fall 2001.

"CDFA and Secretary Lyons have been very open to the needs and concerns of organic agriculture."

Brian Leahy, Executive Director, California Certified Organic Farmers

Marketing Services

The Division of Marketing Services ensures an equitable and orderly

marketplace for California's food and agricultural products by administering a number of marketing programs. These marketing programs were established to encourage efficient production and trade of California's diverse agricultural products at reasonable prices to consumers.

Specifically, the division provides:

- Administrative guidance and oversight to California's 50 marketing boards.
- Information and economic analysis on dairy marketing and key agricultural issues.
- Accurate accounting and verification of nearly \$4 billion in payments made to California dairy producers each year.
- Confidence and stability in agricultural markets through an effective licensing program of agricultural handlers and processors.
- Preparation of statistics on California agriculture through a joint federal-state cooperative agreement.

Marketing Services comprises five branches: California Agricultural Statistics Service, Dairy Marketing, Market Enforcement, Marketing and Milk Pooling.

CALIFORNIA AGRICULTURAL STATISTICS SERVICE

In a joint effort with the United States Department of Agriculture's National Agricultural Statistics Service that spans more than 40 years, the California Agricultural Statistics Service prepares and distributes statistics on California agriculture. Activities include estimates of planted and harvested acreage, production, stocks and crop use. Information prepared by the service enables interested parties to make sound marketing and economic decisions.

Spotlight: The California Agricultural Statistics Service compiled much of the agricultural production data throughout this publication.

DAIRY MARKETING

Dairy Marketing encourages the sound production and marketing of dairy products by resolving public policy issues and providing key market information. Specifically, the program establishes minimum milk farm prices and enforcement of statutes prohibiting unlawful marketing practices relating to milk and dairy products.

Spotlight: Dairy Marketing has fully engaged in an ongoing strategic planning process, establishing specific goals for completion this year.

Listed below are a number of accomplishments:

- Held six hearings on milk pricing and pooling since January 12, 2001, this exceeds the previous average of four hearings per year.
- Released new annual reports on dairy statistics and costs of production.
- Delivered a report to the Legislature on the effect of the Consumer Milk Price Survey on milk prices in California.

MARKET ENFORCEMENT

This program promotes and fosters equitable marketing practices among producers, handlers and processors of California farm products through the regulation of marketing practices. It fulfills this mission by issuing licenses, conducting audits and applying corrective enforcement, where needed.

Spotlight: During 2000, the branch issued over 10,000 licenses to individuals or entities. The enforcement staff conducted unlicensed operator sweeps in Southern California in cooperation with the Los Angeles Police Department and San Diego County Agricultural Commissioner's office, resulting in the collection of more than \$12,000 in fees from unlicensed operators.

Four investigations were referred by the branch to local district attorney's offices for civil or criminal prosecution for violations of the Food and Agricultural Code. One of the prosecutions included grand theft, a violation of the Penal Code. The branch

investigators also assisted the United States Department of Agriculture's Office of the Inspector General, United States Customs, United States Immigrations and local authorities in Los Angeles to search and apprehend a licensed operator that was importing prohibited farm products (sweet limes) from Mexico into California.

MARKETING

This program provides administrative guidance for California marketing programs established under state law. There are 25 marketing orders and two marketing agreements operating under the Marketing Act. In addition, three councils and 20 commissions operate under their individual laws. These organizations allow commodity producers and/or handlers to collectively assess themselves to create and conduct advertising, promotion, research and inspection programs that benefit the industry as a whole.

Spotlight: The Marketing Branch is administering its highest number of marketing programs ever, and continually responds to numerous inquiries from commodity groups to establish new ones.

In 2001, the branch was asked to consider implementing the state's first multi-commodity program geared to promote California-grown agricultural products to California consumers. This program follows other successful ones in New Jersey and Texas. After receiving

strong support from the Legislature, the governor, and members of the agricultural industry, the Marketing Branch entered into the Buy California marketing agreement in October 2001.

MILK POOLING

This program administers the Milk Pooling Act, which provides standards for distributing monthly statewide bulk market milk revenues to California dairy producers.

Spotlight: The statewide pooling system accounts to a central milk revenue pool based on both the receipts and utilization of market milk. All pool computations are performed in a highly automated mainframe-based system with built-in checks and balances to ensure the integrity, accuracy and reliability of all collected and processed data.

Dairy industry outreach continues to be a priority of the branch. When new milk processors begin business in California or the processor hires new staff, the branch provides information and training relative to the state's milk pooling reporting and accountability requirements.

Measurement Standards

The Division of Measurement Standards prides itself on a mission to preserve and maintain the standards of measurement essential in providing a basis of value comparison and fair competition in the marketplace.

"On behalf of the California table grape industry, thank you for your leadership in moving the concept of a Buy California program toward reality."

*Kathleen Nave, President
California Table Grape
Commission*

The division fulfills its mission through enforcement of California laws and regulations governing weights and measures by ensuring the accuracy of commercial weighing and measuring devices; verifying the quantity of both bulk and packaged commodities; and enforcing quality, advertising and labeling standards for most petroleum products.

The division comprises three branches that work closely with county sealers of weights and measures to carry out the vast majority of enforcement activities at the local level.

Spotlight: The division redesigned its Web page, www.cdfa.ca.gov/dms, to provide users with a helpful tool to access up-to-date information. In addition, the division established a direct e-mail address at DMS@cdfa.ca.gov to link users with the program that can answer their weights and measures inquiries.

COMPLIANCE AND EVALUATION BRANCH

California law requires that all new models of commercial weighing and measuring devices be evaluated and approved by the California Department of Food and Agriculture prior to use in the state. This activity is carried out through two programs:

California Type Evaluation Program

This program operates one of only four laboratories in the National Type Evaluation Program and United States/Canada Mutual Recognition Program. As the only authorized laboratory in the Western United States, the California laboratory serves to evaluate and approve weighing and measuring devices for manufacturers in California as well as other states and countries. These devices are typically marketed throughout the United States and are used commercially to ensure accurate transactions involving measurable commodities.

Measurement Compliance Program

The Measurement Compliance Program is composed of three distinct functions. The first is to minimize measurement error in commercial transactions through periodic inspection and testing of commercial weighing and measuring devices, such as supermarket checkout scales, gasoline dispensers and large capacity truck scales.

The second function assures that sales of commodities are accurately measured to minimize errors and fraud. The program enforces laws and regulations relative to the Fair Packaging and Labeling Act to minimize deceptive packaging and to ensure value comparison in the marketplace.

The third function of this program is responsible for registering service agencies and their employees who perform services for users of commercial weights and measures devices.

The program also continues to take a strong proactive stand on uniformity issues. With more than 700 weights and measures jurisdictions in the United States alone, interstate commerce could virtually stop if device specifications and label requirements differed from jurisdiction to jurisdiction. Manufacturing costs would soar if custom products were required in different regions. The same problems would exist on a global scale. For this reason, the program continues to work closely with national and international organizations to develop standards for weights and measures activities.

Spotlight: The compliance program was given an opportunity to provide training to the Northwest weights and measures community. Weights and measures officials employed by the state of Washington and cities of Spokane, Seattle, Tacoma, as well as neighboring states, were provided in-depth training by the program in the proper inspection and testing of medium-capacity scales.

METROLOGY BRANCH

The Metrology Branch maintains the state standards of measurement, in concert with the National Institute of Standards and Technology, which form the legal and scientific basis for all California commercial transactions

involving weights and measures. The branch also coordinates measurement activities among local agencies, industry and the general public. Part of that activity involves certification of standards used by state and local agencies and industrial clients.

Spotlight: The metrology program is performing proficiency testing for counties in order to provide a more efficient system of monitoring state standards. Specifically, the program enables counties to certify industry field standards when installing devices for commercial transactions in the state of California.

WEIGHMASTER/PETROLEUM BRANCH Petroleum Products Program

The department's Petroleum Products Program maintains minimum quality standards for fuels (gasoline, gasoline/oxygenate blends, diesel fuel, kerosene, compressed natural gas and fuel oil) and most automotive products (motor oil, brake fluid, automatic transmission fluid, gear oil and engine coolants) that are sold in California. It further regulates the advertising and labeling of these products.

The goal of this program is to monitor the marketplace through open inspections and undercover investigations in order to ensure the quality of these products. Inspectors test both routine and suspect samples through the operation of two laboratories within the state. When substandard products are found, the program will remove them from the marketplace and take appropriate enforcement action.

Spotlight: The petroleum program took action against a service station for selling a lower-octane fuel that was advertised as higher-octane and charging the higher-octane price. Charges of conspiracy to commit Business and Professions Code violations and grand theft were filed with the Marin County District Attorney's office. The resulting penalties included a substantial fine and jail time for owners of the company.

Weighmaster Enforcement Program

The Weighmaster Enforcement Program assures that commercial transactions, based on quantities certified on a weighmaster certificate, are accurate. It carries out this goal by licensing individuals or firms that weigh or measure bulk commodities and by issuing certificates of accuracy.

The program accomplishes enforcement activity through open inspections and undercover investigations. These enforcement activities enable the program to verify weight statements on weighmaster certificates, conduct inspections of establishments involved in bulk sales, and investigate complaints alleging fraudulent use or misuse of weighmaster certificates.

Plant Health and Pest Prevention Services

The California Department of Food and Agriculture has the only comprehensive program to protect California from exotic and invasive pests. The existing program, under the Division of Plant Health and Pest Prevention Services, features components for excluding, detecting, eradicating or controlling harmful and invasive insects, weeds, plant diseases, birds, rodents and other destructive pests.

Plant Health and Pest Prevention Services comprises four branches: Pest Detection/Emergency Projects, Pest Exclusion, Integrated Pest Control and Plant Pest Diagnostics.

PEST EXCLUSION

The Pest Exclusion Branch keeps dangerous plant pests out of the state and stops or reduces the spread of newly arrived pests or diseases. The branch operates inspection stations along California's borders to screen cars, trucks and buses for unwanted pests. Large shipments entering by land, sea or air are inspected at unloading and transfer sites within the state. The branch also manages programs for nursery, seed and cotton to ensure that quality standards are met, and provides a certification program for exporters who want to ship pest-free agricultural products to other states and countries.

Spotlight: The ability to rapidly execute export certification for perishable commodities is essential if California's agricultural industry is to remain competitive in the world marketplace.

Under Interior Pest Exclusion, there is one function that is totally service oriented—the Phytosanitary Certification Program. This program was developed to facilitate the export of California's agricultural commodities to other states and countries. It comprises three major activities: negotiating phytosanitary entry requirements with other states and countries, providing industry with current information on entry requirements, and

performing inspections and issuing export certificates for qualifying agricultural commodities.

Nearly 18 percent of California's food and agricultural commodities are exported to foreign markets at a value of more than \$6.5 billion. There are approximately 1,000 state and county staff trained and certified to perform these export activities. More than half (or 140,000) of the export certificates issued annually in the United States come from California. The error rate for issuance of certificates is less than 1 percent, which exemplifies the overall quality of this program.

PEST DETECTION/EMERGENCY PROJECTS

The Pest Detection/Emergency Projects Branch detects and eradicates new infestations of foreign invasive pests in California. The branch manages an exotic insect pest trapping program that deploys close to 108,000 traps statewide during peak summer months. It has conducted over 60 successful eradication projects in California against serious invasive pests such as Mediterranean fruit fly (Medfly), Japanese beetle and gypsy moth.

The branch maintains a sterile Medfly production laboratory in Hawaii. This state-of-the-art facility produces a male-only strain of Medfly. These sterile flies, and sterile flies from Guatemala and a United States Department of Agriculture facility in Hawaii, are released over the Los Angeles basin to prevent Medfly colonization. In addition, the branch partially funds a Mexican fruit fly production facility in Mexico. Flies produced at this facility are used to eradicate incipient infestations of Mexican fruit fly in California.

INTEGRATED PEST CONTROL

The Integrated Pest Control Branch directs seven pest control and eradication programs and one pest control research program. The branch conducts weed and vertebrate pest programs in rangelands, waterways, crops, woodlands and urban areas. It also manages California's largest biological control program, which evaluates, raises and releases natural enemies to provide long-term control of serious established pests.

Spotlight: The branch's GIS Lab uses specialized Geographic Information System (GIS) software and techniques to produce map products related to department activities.

In addition to regular mapping activities, the GIS Lab is implementing an Internet Map Server for the purpose of

distributing map products over the Internet to field personnel and other clients using standard Internet browsers. Online data entry will be an added component of this service.

The map server will allow tracking and mapping of the distribution of invasive weed and insect pests. For instance, the Pierce's Disease Control Program will use the map server to track the glassy-winged sharpshooter. Also, the branch's Weed and Vertebrate Program will use the map server to track noxious weeds and activities related to their control.

"The results of the department's efforts minimized the spread of the glassy-winged sharpshooter in 2000, energized local response when sightings were confirmed, and fast-tracked selection of research programs."

Paul Kronenberg, Executive Director, Family Winemakers of California

PLANT PEST DIAGNOSTICS

The Plant Pest Diagnostics Branch identifies plant diseases, weeds, seeds, nematodes and insect pests from samples submitted by department pest prevention programs, county agricultural agencies, universities and the public. It is located in a state-of-the-art diagnostic facility and maintains important reference collections, including the state's official arthropod collection with 1.5 million specimens, a seed herbarium with 50,000 specimens, a plant herbarium containing 25,000 specimens, and a library with more than 28,000 volumes.

The branch also supports California's agricultural export market by performing analyses needed to determine if shipments meet quarantine certification requirements of other states and countries.

AGRICULTURE STATISTICAL REVIEW

OVERVIEW

Many things come to mind when people think of California. They may think of beautiful weather and white sandy beaches, or places like Disneyland, Hollywood and San Francisco. Seldom do people think immediately of agriculture. However, the Golden State is also home to the largest food and agricultural economy in the nation. No other state even comes close. California's farmers and ranchers have made this state the leader in agricultural production for more than 50 years.

Got milk? California produces almost one out of every five glasses of milk in the nation. The dairy industry continues to grow at an astonishing rate with milk production jumping 6 percent from 1999 to 2000. California also has some of the largest dairies in the country with more than 600 cows on an average dairy, while the United States average is less than 100. In 2000, the average milk production per cow in California was 21,169 pounds, 16 percent higher than the national average.

And, no, you didn't just hear it through the grapevine. California produces most of the grapes grown in the United States. Are you ready to toast your friends with a glass of wine? Chances are it was produced by one of the nearly 1,100 wineries in the state. Warm days and cool nights are very conducive to growing grapes, and California now produces some of the best wines in the world. In 2000, 92 percent of all grapes produced in the nation (raisin, table and wine) came from right here in the Golden State.

Since the state grows more than half of the nation's fruits, nuts and vegetables, there's a fifty-fifty chance it's from California. Oh, and don't forget artichokes, brussels sprouts, almonds, dates, figs, kiwifruit, nectarines, olives, pistachios, dried plums (prunes), and walnuts—they will be hard to find growing in any other state.

California agriculture is more than just food. Golden State farmers also contribute to the creation of products related to manufacturing, health care, printing, education, recreation, transportation, construction, entertainment and personal care. These products range from detergents, x-ray film, antibodies, paper, shampoo, toothpaste, footballs, shoes, flowers, tires and antifreeze to baseball bats.

The Golden State is, by far, the No. 1 agricultural producer and exporter in the United States. If it's for breakfast, lunch or dinner, remember, it was probably grown right here in California.

CALIFORNIA'S GROSS CASH INCOME FOR 2000

Agricultural production and gross cash income in 2000 increased to \$27.2 billion. This income is 1 percent higher than the previous year and fractionally less than the record income set in 1997. Cash receipts from farm marketings totaled \$25.5 billion, up 2 percent from 1999; other farm-related income totaled \$1.65 billion.

The chart below indicates total gross cash income from all farm marketings for 2000. Fruit and nut cash receipts, at \$7.31 billion, jumped 7 percent from last year and comprise 27 percent of the total. Vegetable receipts also increased 7 percent from \$6.25 billion in 1999 to \$6.67 billion in 2000, comprising 25 percent of the total. Livestock and poultry dropped 6 percent and comprise 23 percent of the total. Nursery and greenhouse, with 10 percent of the total was down 1 percent from last year. Field crops accounted for 9 percent of the total; their cash receipts dropped 1 percent from the previous year.

CALIFORNIA'S GROSS CASH INCOME, 2000

The Golden State's two leading commodities in cash receipts are milk with \$3.70 billion and grapes with \$2.84 billion. Nationally, California has about 19 percent of total milk receipts and 91 percent of grape receipts. Growth in these two commodities over the last ten years is shown in the following charts.

NOTABLE INCREASES IN MARKETINGS:

Broccoli	24%
Cabbage	48%
Cauliflower	28%
Celery	48%
Corn for Grain	30%
Cotton	34%
Grapes, Wine	23%
Hogs and Pigs	22%
Lettuce	31%
Pistachios	46%
Raspberries	32%
Spinach	29%
Tangerines	28%
Tomatoes, Fresh Market	31%

SIGNIFICANT DECREASES IN MARKETINGS:

Apples	38%
Brussels Sprouts	27%
Carrots	23%
Corn, Sweet	26%
Dates	35%
Grapefruit	25%
Grapes, Raisin	28%
Olives	40%
Oranges, Valencia	55%
Tomatoes, Processing	28%

CALIFORNIA FARM FACTS

California has 87,500 farms, which constitute about 4 percent of the nation's total. However, these farms account for 13 percent of the national gross cash receipts from farming. Some 350 crops are recognized in California, including seeds, flowers and ornamentals.

This directory contains information on roughly 67 major crops grown on a large commercial scale in California:

- 13 field crops
- 25 fruit and nuts
- 29 vegetable and melons
- Nursery products and cut flowers

In addition, data are shown for 11 livestock, poultry and other products.

CALIFORNIA'S TOP 20 COMMODITIES

California's top 20 crop and livestock commodities account for 72 percent of the state's gross farm income. The Golden State accounts for most production in the United States for a large number of these specialty crops. Milk and cream production remained No. 1 in 2000, followed by grapes and nursery products.

LEADING COUNTIES

California has some of the most agriculturally productive counties in the nation. According to the 1997 Census of Agriculture's ranking of market value of products sold, eight of the nation's top 10 producing counties are in California.

Fresno is the leading agricultural county in the nation, and in 2000 it reached \$3.42 billion in agricultural value. If ranked separately, Fresno County's agricultural cash receipts would rank it ahead of more than half the other states in the union.

progress. Development of most fruit and nut crops was nearly normal throughout the remainder of the growing season, with temperatures ranging from slightly below normal to normal. Generally speaking, most fruit crops had good quality, but sizes were small. The mild weather during the growing and harvest seasons allowed growers to produce a crop with few problems.

Rainfall disrupted planting and slowed development of many winter vegetables. However, warm weather in April allowed crops to be planted and progress normally. During May, June and July temperatures ranged both above and below normal, but there were no real extremes. Most vegetable crops developed normally and harvest proceeded on schedule. However, in October and November the cool, wet weather slowed development and lowered quality of some vegetables produced in the San Joaquin Valley. Good supplies still came from the Salinas Valley.

Cotton was planted on schedule, but rainfall and cool temperatures during April forced some replanting. Much of the American Pima cotton that was abandoned in spring was replanted to Upland cotton. Most other field crops progressed normally throughout the year, with only occasional problems. Insect pressure was generally light and good fall weather allowed harvest to progress on schedule.

WEATHER HIGHLIGHTS FOR 2000

The winter weather of 1999-2000 was rather uneventful. Rainfall was abundant and supplied an ample snow pack that provided moisture for the remainder of the year. Heavy rainfall in January and February of 2000 delayed many cultural activities such as pruning, planting, spraying and ground preparation. Cold temperatures provided sufficient chilling for a good dormancy, which is important for many of the non-citrus crops. Almonds began blooming in late February and reached full bloom by early March. Bee colonies were placed in almond orchards for pollination, but the cool, wet weather often hampered bee activity. Stone fruit blossom began in early March and warm weather through March and April accelerated crop

TOP 5 AGRICULTURAL STATES IN CASH RECEIPTS, 2000

State	Rank	Total Value <i>Billion Dollars</i>
California	1	25.5
Texas	2	13.3
Iowa	3	10.8

² The methods used to determine exports for these commodities were updated in 2001 and applied to 2000 data and 1999 revised data.

GLOBAL MARKETPLACE

California is the nation's leader in agricultural exports, annually shipping more than \$6.5 billion in both food and agricultural commodities around the world. To highlight the importance of these exports, it is estimated that nearly 18 percent of California's agricultural production is shipped to foreign markets.

In 2000, almonds remained the leading agricultural export from California, representing nearly 10 percent of the total. Cotton, another leading export, experienced a 39 percent increase in export value due to increased production. A notable increase in exports occurred for California oranges, as exports rebounded an estimated 105 percent from weather-related damage the previous year.

In terms of foreign markets, Canada remains the largest export destination for California, surpassing Japan for the second consecutive year. Canada and Japan continue to be the state's major export destinations. When combined, these two nations account for more than a quarter of California's total agricultural exports.

With key international markets in Asia, Europe and North America, as evidenced from these two tables, California agriculture is clearly enjoyed around the world.

¹ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

² Final sector output is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of income from production earned by all factors-of-production. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

¹ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

² Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

³ Based on values published in the county agricultural commissioners' annual crop reports.

⁴ Share of U.S. production based on 1997 Census of Agriculture.

⁵ The 2000 price and value are based on the 1999 California average price.

⁶ Extracted from county agricultural commissioners' annual crop reports.

⁷ Includes sunflower, safflower and canola.

⁸ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

⁹ Includes cut flowers, potted plants, foliage plants, bedding plants and indoor decoratives.

1996	86,000	29,000	337
1997	87,000	28,700	330
1998	89,000	28,500	320
1999	89,000	27,800	312
2000	87,500	27,800	318

¹ Until 1950 the definition of a farm was "places of 10 or more acres that had annual sales of agricultural products of \$50 or more and places of less than 10 acres that had annual sales of \$250 or more." Starting in 1975, the new definition of a farm is "places with annual sales of agricultural products of \$1,000 or more."

COUNTY RANK, TOTAL VALUE OF PRODUCTION AND LEADING COMMODITIES, 2000¹

Rank		County	Total Value \$1,000	Leading Commodities
1999	2000			
1	1	Fresno	3,418,622	Grapes, Poultry, Cotton, Tomatoes, Milk
2	2	Tulare	3,066,533	Milk, Navel and Valencia Oranges, Grapes, Cattle and Calves, Plums
3	3	Monterey	2,923,255	Head and Leaf Lettuce, Broccoli, Strawberries, Grapes, Nursery Products
4	4	Kern	2,208,541	Grapes, All Citrus, Cotton, All Milk, Almonds
5	5	Merced	1,538,538	Milk, Chickens, All Tomatoes, Cattle and Calves, Almonds
6	6	San Joaquin	1,348,709	All Grapes, All Milk, All Tomatoes, Almond Meats, All Cherries
7	7	San Diego	1,253,834	Flowers and Foliage, Nursery Plants, Avocados, Eggs, Tomatoes
8	8	Stanislaus	1,197,302	All Milk, Almonds, All Chickens, Cattle and Calves, Fruit and Nut Nursery
9	9	Riverside	1,048,562	Milk, Nursery Products, Table Grapes, Eggs, Lemons
10	10	Ventura	1,047,054	Lemons, Celery, Fresh Market Strawberries, Avocados, Nursery Plants
11	11	Imperial	919,610	Cattle, Alfalfa, Lettuce, Carrots, Sugar Beets
12	12	Kings	885,062	Market Milk, Cotton, Cattle and Calves, Alfalfa Hay, Turkeys
14	13	Madera	748,199	Grapes, Milk, Almonds and Hulls, Pistachios, Nursery Stock
15	14	Santa Barbara	739,504	Broccoli, Wine Grapes, Strawberries, Head Lettuce, Cauliflower
13	15	San Bernardino	619,999	Milk, Cattle and Calves, Eggs, Nursery Products, Oranges
16	16	Sonoma	585,039	Wine Grapes, Market Milk, Livestock and Poultry, Cattle and Calves, Grapevines
18	17	San Luis Obispo	487,654	Wine Grapes, Broccoli, Head Lettuce, Cattle and Calves, Cut Flowers
21	18	Orange	366,422	Nursery Stock and Cut Flowers, Strawberries, Tomatoes, Avocados, Bell and Misc. Peppers
19	19	Colusa	345,987	Rice, Processing Tomatoes, Almond Meats, Onion Seed, Cattle and Calves
27	20	Napa	343,948	Wine Grapes, Nursery and Floriculture Crops, Cattle and Calves, Pasture and Range, Livestock and Poultry Products
20	21	Sutter	343,496	Rice, Dried Plums (Prunes), Peaches, Walnuts, Tomatoes
17	22	Santa Cruz	337,913	Fresh Market Strawberries, Raspberries, Head Lettuce, Nursery Products, Cut Flowers
22	23	Yolo	302,736	Processing Tomatoes, Wine Grapes, Rice, Alfalfa Hay, Seed Crops
31	24	Santa Clara	300,900	Nursery Crops, Mushrooms, Cut Flowers, Wine Grapes, Bell Peppers
24	25	Butte	291,345	Rice, Almonds, English Walnuts, Dried Plums (Prunes), Clingstone Peaches
23	26	Sacramento	285,572	Wine Grapes, Milk, Nursery Stock, Bartlett Pears, Field Corn
25	27	Glenn	280,899	Paddy Rice, Dairy Products, Almonds, Dried Plums (Prunes), Cattle and Calves
26	28	Los Angeles	268,158	Nursery Plants, Root Vegetables, Dry Onions, Peaches, Alfalfa Hay
29	29	San Benito	208,899	Salad Greens, Nursery Products, Wine Grapes, Livestock Products, Leaf Lettuce
30	30	San Mateo	194,131	Nursery Stock and Plants, Mushrooms, Potted and Cut Flowers, Forest Products, Brussels Sprouts
28	31	Solano	185,109	Nursery Stock, Processing Tomatoes, Wine Grapes, Cattle and Calves, Alfalfa Hay
32	32	Yuba	148,341	Rice, Dried Plums (Prunes), Peaches, Walnuts, Cattle and Calves
33	33	Mendocino	128,572	Wine Grapes, Bartlett Pears, Cattle and Calves, Milk, Pasture
34	34	Siskiyou	118,981	Alfalfa Hay, Strawberry Plants, Cattle and Calves, Irish Potatoes, Irrigated Pasture
35	35	Tehama	110,704	Dried Plums (Prunes), English Walnuts, Market Milk, Cattle and Calves, Almonds
36	36	Humboldt	96,733	Nursery Products, All Milk, Cattle and Calves, Pasture and Range, Vegetable Crops
37	37	Contra Costa	92,598	Nursery Plants, Grapes, Cattle and Calves, All Milk, Sweet Corn
39	38	Placer	60,509	Milling Rice, Cattle and Calves, Nursery Products, Chickens, Irrigated Pasture
38	39	Modoc	56,731	Alfalfa Hay, Cattle and Calves, Irish Potatoes, Fruit and Nut Crops, Pasture and Range
42	40	Lake	53,603	Wine Grapes, Pears, Cattle and Calves, English Walnuts, Grain and Other Hay
43	41	Lassen	52,665	All Hay, Strawberry Plants, Cattle and Calves, Irrigated Pasture, Wild Rice
41	42	Shasta	50,023	Cattle and Calves, Strawberry Plants, Alfalfa and Other Hay, Pasture and Range, Nursery Products
40	43	Marin	48,189	Market Milk, Cattle and Calves, Pasture and Range, Poultry, Livestock Products
44	44	Alameda	31,913	Nursery Products, Wine Grapes, Cattle and Calves, Pasture and Range, Vegetable Crops
45	45	Del Norte	30,792	All Milk, Nursery Plants and Products, Cattle and Calves, Livestock Products, Irrigated Pasture
46	46	El Dorado	24,166	Apples, Wine Grapes, Pasture and Range, Christmas Trees, Cattle and Calves
47	47	Amador	22,692	Grapes, Cattle and Calves, Pasture and Range, Alfalfa and Grain Hay, Irrigated Pasture
48	48	Mono	21,101	Alfalfa and Other Hay, Carrots, Cattle and Calves, Irrigated Pasture, Sheep and Lambs
49	49	Mariposa	18,622	Cattle and Calves, Pasture and Range, Livestock and Poultry Products, All Poultry, Forest Products
51	50	Calaveras	17,615	Cattle and Calves, Wine Grapes, Poultry, Livestock and Poultry Products, Walnuts
50	51	Plumas	17,590	Cattle and Calves, All Hay, Pasture and Range, Fruit and Nut Crops, Livestock
52	52	Tuolumne	16,864	Cattle and Calves, Pasture and Range, Firewood, Fruit and Nut Crops, Apiary Products
53	53	Inyo	14,482	Turf, Cattle and Calves, Alfalfa and Other Hay, Pasture and Range, Carrots
54	54	Nevada	7,144	Cattle and Calves, Pasture and Range, Wine Grapes, Nursery Stock, Fruit and Vegetable Crops
55	55	Sierra	6,260	Cattle and Calves, Pasture and Range, All Hay, Fruit and Nut Crops, Livestock
56	56	Trinity	2,139	Cattle and Calves, Pasture and Range, Wine Grapes, Nursery Products, Other Hay
57	57	San Francisco	2,013	Vegetable Crops, Cut Flowers
58	58	Alpine	0	—

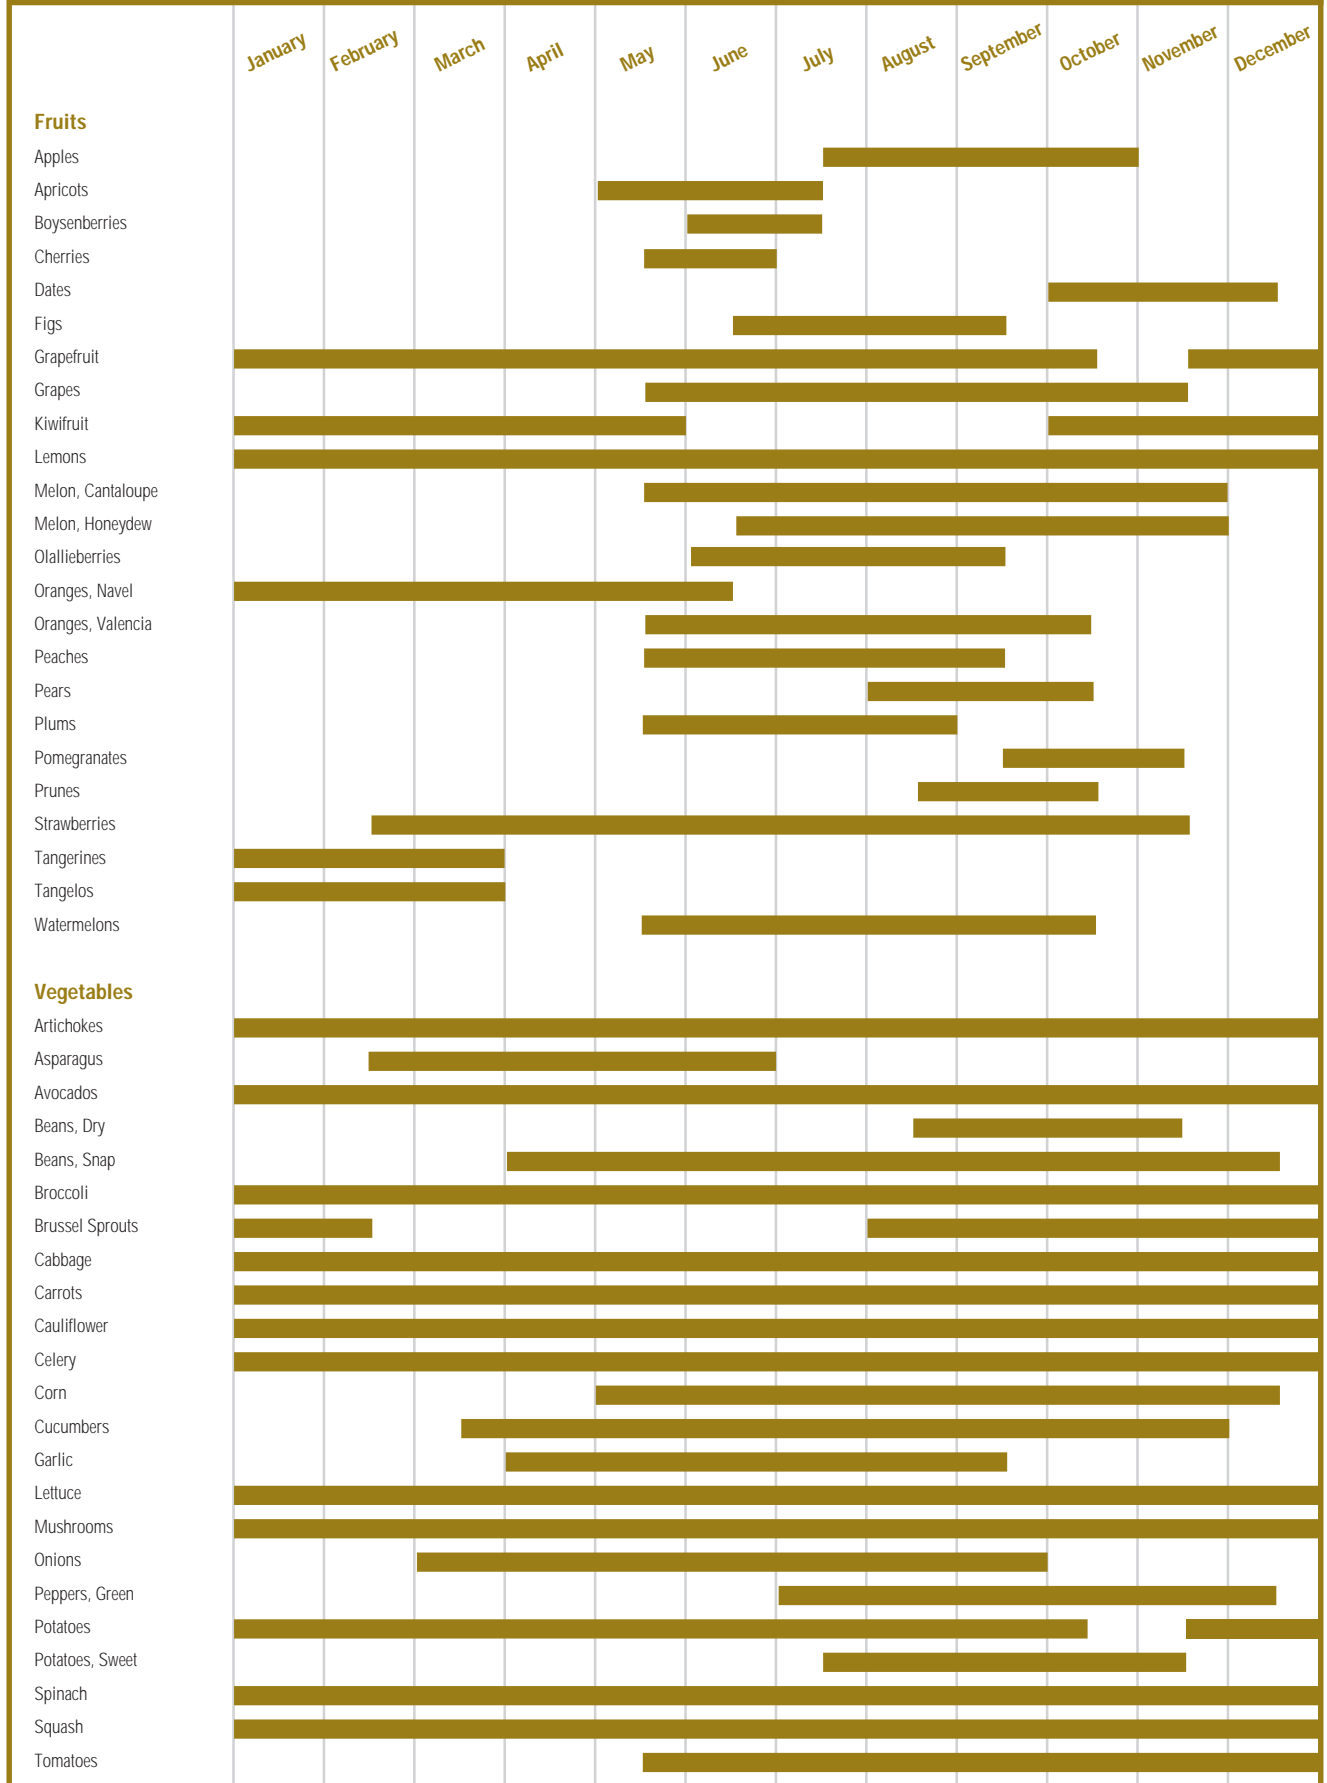

¹ Reports for Alpine and Trinity counties were not available at publication; therefore, 1999 data were used for this report. Lake County was also not available at publication, so grape acreage data are from the 2000 Grape Acreage Report, price and production data are from the 2000 Grape Crush Report, pear and walnut data are from industry sources, and all other data are from the 1997 Lake County Agricultural Commissioner's Report.

CALIFORNIA'S FRUIT AND VEGETABLE CROP SEASONS

COUNTY STATISTICAL DATA

California's counties reported an increase of 2.4 percent in the value of their agricultural production for 2000. Ten counties reported a production value in excess of \$1.00 billion. Fresno County continues to lead with a production value of \$3.42 billion, a decrease of 4.1 percent from last year's total. Tulare County was second in value of production. Monterey agricultural production increased 23 percent, due primarily to sharply higher vegetable values.

NOTES TO THE AGRICULTURAL COMMISSIONERS' DATA

Gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the farm where it was produced. Values placed on pasture and range feed are included, and fresh fruit and veg-

etable crop values are based on the free on board (F.O.B.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The county agricultural commissioners' reports also provide statistics on a broader range of commodities than estimates prepared by other agencies.

Because of these variations, the state total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by the California Agricultural Statistics Service. The larger total value reported by agricultural commissioners is the result of different definitions used in estimating total value of production rather than cash receipts to producers.

Some counties are now including timber as part of their crop report, following the pattern set by the County Agricultural Commissioners' Association. Since it is not comparable to earlier county summaries, timber has not been included in the main tables of this summary. Total value reported by the counties, including timber, is 3 percent more than the \$29.3 billion recorded in the "County Gross Value of Agricultural Production, by Commodity Group, 1999-2000" table.

Copies of county agricultural commissioners' reports may be requested directly from each county agricultural commissioner's office. For contact information, refer to the directory section of this publication.

NOTABLE CHANGES IN COUNTY RANKINGS AND PERCENTAGES OF THE STATE TOTAL

Rank	Commodity	Changes in County Rankings
1	Grapes, All	Fresno is No. 1 with 17 percent of the total.
2	Milk	Tulare increases its lead.
3	Nursery Products	San Diego leads with 16 percent of the total.
4	Cattle and Calves	Tulare is No. 1 and growing.
5	Lettuce	Monterey leads with more than five of every 10 dollars.
6	Cotton	Fresno has one-third of the total.
7	Oranges	Tulare is first with a little more than half of the total.
8	Flowers and Foliage	San Diego has more than half of the total.
9	Almonds	Kern is No. 1 followed by Stanislaus and Fresno.
10	Strawberries	Monterey captures the lead from Ventura.
11	Hay, Alfalfa	Imperial is No. 1 with 17 percent.
12	Chickens	Merced leads with Stanislaus in second.
13	Rice (Excluding Seed)	Colusa is No. 1 followed by Sutter.
14	Broccoli	Monterey is No. 1 with more than half.
15	Tomatoes, Processing	Fresno leads with more than 40 percent of the total.

COUNTY RANK BY GROSS VALUE OF AGRICULTURAL PRODUCTION, 1999-2000¹

County	Rank With Timber			County	Rank Without Timber		
	1999 \$1,000	2000 \$1,000	Percent Change		1999 \$1,000	2000 \$1,000	Percent Change

¹ Totals vary slightly from those published by counties due to classification differences between county and state reports. Reports for Alpine and Trinity counties were not available at publication; therefore, 1999 data were used for this report. Lake County was also not available at publication, so grape acreage data are from the 2000 Grape Acreage Report, price and production data are from the 2000 Grape Crush Report, pear and walnut data are from industry sources, and all other data are from the 1997 Lake County Agricultural Commissioner's Report. Numbers in parentheses are county rankings.

LEADING COMMODITIES FOR GROSS VALUE OF AGRICULTURAL PRODUCTION BY COUNTY, 2000¹

\$1,000

ALAMEDA

1. Nursery, Woody Ornamentals	8,732
2. Grapes, Wine	6,498
3. Cattle and Calves	6,250
4. Nursery Products	3,728
5. Pasture and Range	2,850
6. Flowers, Cut	1,589
7. Vegetable Crops	958
8. Hay, Other	526
9. Field Crops	475
10. Hay, Alfalfa	168

AMADOR

1. Grapes	12,449
2. Cattle and Calves	6,055
3. Pasture and Range	1,837
4. Livestock	530
5. Hay, Grain	250
6. Pasture, Irrigated	230
7. Walnuts, English	211
8. Hay, Alfalfa	178
9. Nursery, Flower Propg. Materials	160
10. Corn, Grain	146

BUTTE

1. Rice	112,340
2. Almonds	47,547
3. Walnuts, English	38,012
4. Plums, Dried (Prunes)	31,115
5. Peaches, Clingstone	7,144
6. Field Crops	7,115
7. Nursery Stock	5,961
8. Cattle and Calves	5,684
9. Kiwifruit	5,214
10. Seed, Rice	4,514

CALAVERAS

1. Cattle and Calves	6,722
2. Grapes, Wine	1,690
3. Poultry	1,614
4. Livestock and Poultry Products	810
5. Walnuts	660
6. Nursery Products	300
7. Apiary Products	232
8. Vegetable Crops	170
9. Trees, Christmas	152
10. Sheep and Lambs	104

COLUSA

1. Rice	159,876
2. Tomatoes, Processing	41,842
3. Almonds, Meat	28,166
4. Seed, Onion	11,561
5. Cattle and Calves	10,682
6. Cotton Lint	10,517
7. Seed, Rice	8,039
8. Walnuts, English	6,821
9. Plums, Dried (Prunes)	6,171
10. Seed, Cucumber	5,852

CONTRA COSTA

1. Nursery, Bedding Plants	22,700
2. Grapes	8,900
3. Cattle and Calves	8,400
4. Milk, All	7,200
5. Corn, Sweet	7,000
6. Tomatoes, All	5,700
7. Apples, All	4,100
8. Nursery, Herbaceous Perennials	3,300
9. Vegetable Crops	3,100
10. Pasture and Range	2,800

DEL NORTE

1. Milk, Market	6,911
2. Nursery, Flower Bulbs/Crms./Rhiz.	6,097
3. Nursery, Woody Ornamentals	5,122
4. Nursery Products	4,209
5. Cattle, Cows	2,985
6. Cattle, Calves Only	1,200
7. Milk, Manufactured	1,159
8. Livestock Products	1,140
9. Pasture, Irrigated	646
10. Hay, Other	459

EL DORADO

1. Apples	4,450
2. Grapes, Wine	4,060
3. Pasture and Range	2,940
4. Trees, Christmas	2,933
5. Cattle and Calves	2,617
6. Nursery, Flower Propg. Materials	2,043
7. Livestock	1,260
8. Nursery, Woody Ornamentals	836
9. Cherries	794
10. Peaches	593

FRESNO

1. Grapes	642,385
2. Poultry	400,065
3. Cotton	354,440
4. Tomatoes	279,754
5. Milk	198,821
6. Cattle and Calves	186,734
7. Almonds	117,983
8. Lettuce, Head	109,032
9. Plums	97,760
10. Peaches	95,120

GLENN

1. Rice, Paddy	102,538
2. Dairy Products	32,891
3. Almonds	27,791
4. Plums, Dried (Prunes)	18,077
5. Cattle and Calves	16,436
6. Corn	9,979
7. Walnuts	8,640
8. Hay, Alfalfa	8,325
9. Olives	5,323
10. Sugar Beets	4,738

HUMBOLDT

1. Nursery Products	32,859
2. Milk, Market	21,465
3. Cattle and Calves	17,184
4. Milk, Manufactured	12,052
5. Pasture and Range	4,700
6. Livestock	3,339
7. Vegetable Crops	814
8. Sheep and Lambs	497
9. Fruit and Nut Crops	430
10. Silage	269

IMPERIAL

1. Cattle	158,606
2. Alfalfa	121,524
3. Lettuce	78,899
4. Carrots	55,650
5. Sugar Beets	45,062
6. Livestock, Misc.	43,224
7. Lettuce, Leaf	41,629
8. Broccoli	30,719
9. Cantaloupes	30,714
10. Onions	28,486

INYO

1. Nursery, Turf	3,500
2. Cattle, Steers	2,856
3. Cattle, Heifers	2,098
4. Hay, Alfalfa	1,887
5. Cattle, Cows	1,316
6. Cattle, Stockers and Feeders	792
7. Pasture, Irrigated	380
8. Pasture and Range	345
9. Carrots	276
10. Hay, Other	270

KERN

1. Grapes	438,366
2. Citrus, Fresh and Processing	291,124
3. Cotton and Processed Cottonseed	226,050
4. Milk, Market and Manufacturing	156,301
5. Almonds and by-products	142,284
6. Pistachios	124,085
7. Nursery Crops	106,246
8. Hay, Alfalfa	91,209
9. Potatoes, Fresh and Processing	78,744
10. Cattle and Calves	55,995

KINGS

1. Milk, Market	291,897
2. Cotton Lint, Upland	111,703
3. Cotton Lint, American Pima	85,978
4. Cattle and Calves	62,617
5. Cottonseed	34,419
6. Hay, Alfalfa	33,928
7. Turkeys	30,449
8. Wheat, All	28,993

¹ The data rankings were extracted from county agricultural commissioners' reports, where published. Those not ranked by the counties were ranked by the California Agricultural Statistics Service. Timber was omitted in rankings. Reports for Alpine and Trinity counties were not available at publication; therefore, 1999 data were used for this report. Lake County data was also not available at publication, so grape acreage data are from the 2000 Grape Acreage Report, price and production data are from the 2000 Grape Crush Report, pear and walnut data are from industry sources, and all other data are from the 1997 Lake County Agricultural Commissioner's Report.

¹ Compiled from county agricultural commissioners' reports for 2000. Reports for Alpine and Trinity counties were not available at publication; therefore, 1999 data were used for this report. Lake County data was also not available at publication, so grape acreage data are from the 2000 Grape Acreage Report, price and production data are from the 2000 Grape Crush Report, pear and walnut data are from industry sources, and all other data are from the 1997 Lake County Agricultural Commissioner's Report.

² Includes trees, shrubs, vines, bedding plants, bulbs and turf not included in flowers and foliage.

³ Includes cut flowers, potted plants, foliage plants and indoor decoratives.

FIELD CROPS

California's 2000 field crop production was worth \$3.20 billion at the farm-gate level. This value was 2 percent higher than the previous year.

The average value per harvested acre increased from \$609 in 1999 to \$642 in 2000. Production of the major field crops in California reached 27.6 million tons, down 4 percent from the 28.6 million tons produced in 1999.

Cotton was the state's highest-valued field crop with a total of \$898 million, overtaking all hay with a value of \$730 million. Nationally, the Golden State is the leading alfalfa producing state and ranked second in all cotton and all hay production.

The 34 percent increase in the value of cotton was based on an 8 percent increase in harvested acreage, a 17 percent increase in production, and a 14 percent increase in the unit price. The 2000 cotton crop was planted on schedule, but rainfall and cool temperatures during April forced some replanting. Much of the American Pima cotton that was abandoned in spring was replanted to Upland. The crop progressed well throughout the year with only occasional problems. Insect pressure was generally light and good fall weather allowed the harvest to progress.

The large increase in corn for grain production is attributed, almost entirely, to a 27 percent increase in harvested acreage. Rice production actually showed a 19 percent increase in production, but the unit price declined 24 percent resulting in a 10 percent decline in total value. The large decrease in dry bean value is attributed, almost entirely, to a 15 percent decline in harvested acreage, as the unit price remained unchanged from the previous year. Winter wheat production declined 15 percent, while Durum wheat production increased 9 percent. Lower prices for both winter and Durum wheat resulted in a 14 percent decrease for all wheat.

NOTABLE INCREASES IN VALUE:

Corn for Grain	30%
Cotton	34%
Cottonseed	16%

SIGNIFICANT DECREASES IN VALUE:

Dry Beans	14%
Rice	10%
Sugar Beets	12%
Wheat	14%

¹ Production is on a clean basis.² Dashes represent data not published due to the estimate being discontinued, not estimated, or not available.³ Included in "Beans, Other Dry."⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.⁵ Cotton bales are 480 lbs. net-weight.⁶ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1991-2000.⁷ Excludes sweet and wild rice.⁸ Includes some acreage carried over and harvested the following spring.

FLORICULTURE

FLORICULTURE

Floriculture continued its rapid growth in 2000. The industry enjoyed record wholesale values again this year due to the strength of its leading producing states—California, Florida, Michigan, Texas and Ohio. These five states account for over half of the total value.

California maintained its position as the leading floriculture state in the nation, with a total wholesale value of \$842 million. This total represents 20 percent of the national value and a 9 percent increase from the previous year. Aided by its favorable coastal climate, California now accounts for 67 percent of the national value for all fresh, cut flowers. At \$286 million in sales, this represents a 2 percent increase over the 1999 total of \$280 million. The rose is the most popular cut flower in the nation, with California producing roughly 68 percent of all fresh, cut roses grown in the United States. While cut flower demand has continued to rise, domestic production has been declining with over two-thirds of the major cut flowers now imported. Most imports are coming from Columbia, Costa Rica, Ecuador, Mexico and the Netherlands.

California's total sales of potted flowering plants decreased 6 percent from \$151 million in 1999 to \$142 million in 2000. Despite the percentage decrease, California leads the nation in sales of potted flowering plants, with 18 percent of the national value. Sales of foliage plants showed a 24 percent drop from \$93.8 million in 1999 to \$70.8 million in 2000.

The wholesale value of bedding and garden plants jumped 28 percent, from \$234 million in 1999 to \$300 million in 2000. The value for cut, cultivated greens was down 2 percent to \$16.1 million.

Total Cut Cultivated Greens ³	43	—	—	—	—	100	—	16,443
TOTAL ALL PLANTS ⁴								774,877

¹ The total covered growing area of 116,927,000 square feet consisted of the following: 16,669,000 square feet of shade and temporary cover; 13,286,000 square feet of glass; 31,891,000 square feet of fiberglass and other rigid greenhouses; and 55,081,000 square feet of film plastic (single/multi) greenhouses. In addition, plants were produced on 8,043 acres of open ground.

² For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

³ Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

⁴ Based on equivalent wholesale value of all sales for all crops, except potted foliage plants, which are based on net value of sales.

Herbaceous Perennial Plants	—	—	—	—	—	—	—	5,054
Foliage Plants	—	—	—	—	—	—	—	2,951
TOTAL ALL PLANTS ⁶								841,914

¹ The total covered growing area of 108,838,000 square feet consisted of the following: 17,710,000 square feet of shade and temporary cover; 15,115,000 square feet of glass; 30,482,000 square feet of fiberglass and other rigid greenhouses; 45,531,000 square feet of film plastic (single/multi) greenhouses; and 8,035,000 open ground.

² For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

³ Data for 1999 and 2000 are not comparable. Data for 1999 represents net value (total sales minus cost of young plants); 2000 data represents wholesale equivalent value of all sales.

⁴ Data series began in 2000; 1999 data not available.

⁵ Total includes Leatherleaf Ferns, which are not published to avoid disclosure of individual operations.

⁶ Total data for 1999 and 2000 are not comparable, total sales of propagative materials were added in 2000. Total foliage for 1999 represents net value (total sales minus cost of young plants); total foliage for 2000 represents the wholesale equivalent value of all sales.

FRUIT AND NUT CROPS

California produced 15.5 million tons of fruits and nuts in 2000, representing a 21 percent increase from the prior year. This accounts for 42 percent of the national fruit and nut production. The total value of California's fruit and nut production in 2000 was \$6.98 billion, up 2 percent from 1999. This increase represents 58 percent of the national total value of fruit and nut crops.

A record value of production was set for avocados, cherries, table grapes and wine grapes. Grapes continued to be the top-valued fruit and nut crop with \$2.84 billion, up 7 percent from the \$2.66 billion of 1999. California accounts for nearly all the national production of almonds, Clingstone peaches, dates, English walnuts, figs, kiwifruit, nectarines, olives and pistachios.

The Golden State dominates the nation in production of apricots, avocados, grapes, lemons, peaches, plums and strawberries. Crops with record production in 2000 were wine grapes, Freestone peaches, pistachios and strawberries.

SIGNIFICANT INCREASES IN PRODUCTION:

Avocados	18%
Figs	22%
Grapes, Raisin	36%
Grapes, Wine	26%
Kiwifruit	26%
Lemons	17%
Oranges, Navel	91%
Oranges, Valencia	80%
Pecans	79%
Pistachios	98%
Plums, Dried (Prunes)	32%
Tangerines	67%

NOTABLE DECREASES IN PRODUCTION:

Almonds	16%
Apples	27%
Cherries	42%
Dates	35%
Olives	63%
Walnuts	16%

In 2000, California's rainfall was above normal during the winter months, giving much needed moisture to the soil and trees. Cold temperatures provided sufficient chilling for a good dormancy, which is important for many non-citrus crops. Rains slowed the normal cultural activities, such as pruning, spraying and planting. Almonds began blooming in February and were in full-bloom by early March. Bee colonies were placed in almond orchards for pollination, but the cool, wet weather hampered the bees' activities. Blooming of stone fruit began in early March and the warm weather through March and April accelerated crop progress. Crop development of most commodities was almost normal throughout the growing season with temperatures ranging from slightly below normal to normal. Generally speaking, most crops had good fruit quality, but sizes were small. Weather during the growing and harvest seasons was mild, which allowed growers to harvest their crops without any substantial problems. Grapes had a very good year with good quality and a very large crop.

With the exception of grapefruit, which dropped 1 percent, all citrus crops showed major increases in production from the low 1998-1999 frost-affected crops. Navel orange production jumped 90 percent, Valencia oranges rose 80 percent, tangerines went up 67 percent, and lemons were up 17 percent.

¹ Equivalent packinghouse door returns.² Estimates for "Grapefruit, Desert" and "Grapefruit, Other" were combined to "Grapefruit, All" starting in 1995-96. Season average values for all grapefruit are derived by weighing the season average value for each area by their carton weights. Prior to 1993-94, net weight per carton for Desert Valley was 32 pounds.

¹ Return at processing plant door or packinghouse door.

² Acres of raisin type grapes enrolled in the California Raisin Industry Diversion program were: 1990 — zero; 1991 — 20,000; 1992 — 12,500; 1993 — 20,000; 1994 — zero; 1995 — 25,000; 1996, 1997, 1998, 1999 and 2000 — zero. These acres were deducted from bearing acres before calculating yield.

³ Raisin type production is the fresh equivalent of dried and not dried.

⁴ Total value based on grower return.

⁵ Acreage by county, variety and year of planting for 2000 are available upon request.

⁶ These crops are almond hulls, black walnuts, jojobas (until 1991), limes, persimmons, pomegranates, and in 1991, bushberries. Acres exclude almond hulls.

² Miscellaneous seedless grapes with Oleate applied.

³ Missing 2000 data will be available by the end of January 2002.

GRAPE CRUSH

The Final Grape Crush Report includes all grape tonnage crushed during the 2000 season. Changes in tonnage, degrees Brix, and weighted average prices were reported by grape type and variety as well as by grape pricing districts. The 17 districts refer to the area in which grapes were grown as defined in administrative code.

Beginning with the 2000 crop year, Valdepenas variety grapes were combined with Tempranillo variety grapes, and Muscadelle variety grapes were combined with Sauvignon Vert variety grapes.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 2000 crush totaled a record 3,951,185 tons, up 24 percent from the 1999 crush of 3,185,463 tons and up 1.5 percent from the 1997 crush of 3,891,403 tons. Red wine varieties accounted for the largest share of all grapes crushed at 1,815,810 tons, up 28 percent from 1999. The 2000 white wine variety crush totaled 1,502,696 tons, up 26 percent from 1999. Tons crushed of raisin varieties totaled 512,960, up 22 percent from 1999, while tons crushed of table varieties totaled 119,719, down 20 percent from 1999.

Beginning with the 1999 season, the Final Grape Crush Report includes the total number of tons that will be marketed as grape concentrate. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed that are expected to be marketed as grape concentrate. For the 2000 season, this total was 744,828 tons, approximately 19 percent

of the 2000 grape crush total. This report provides the aggregate figure of grapes crushed for concentrate production and does not include information by district, type or variety.

California grape growers received prices in 2000 that were, on average, slightly below the 1999 prices. The 2000 average price of all varieties was \$504.23, down 4 percent from 1999.

AVERAGE PRICES FOR THE 2000 CROP BY TYPE:

Red wine grapes	\$627.97, down 3%
White wine grapes	\$499.99, down 4%
Raisin grapes	\$125.09, down 38%
Table grapes	\$117.96, down 37%

These price levels have not been adjusted for inflation.

LEADING GRAPE VARIETIES AND DISTRICTS

In 2000, Chardonnay accounted for the largest percentage of crush volume with 16 percent. Thompson Seedless, a raisin grape variety, accounted for the second leading percentage of crush with 12 percent of the total. The remaining top 10 were all wine varieties.

Grapes produced in District 4 (Napa County) received the highest average price of \$2,467.08 per ton, up 15 percent from 1999. District 3 (Sonoma and Marin counties) received the second highest return of \$2,038.71, up 8 percent from 1999.

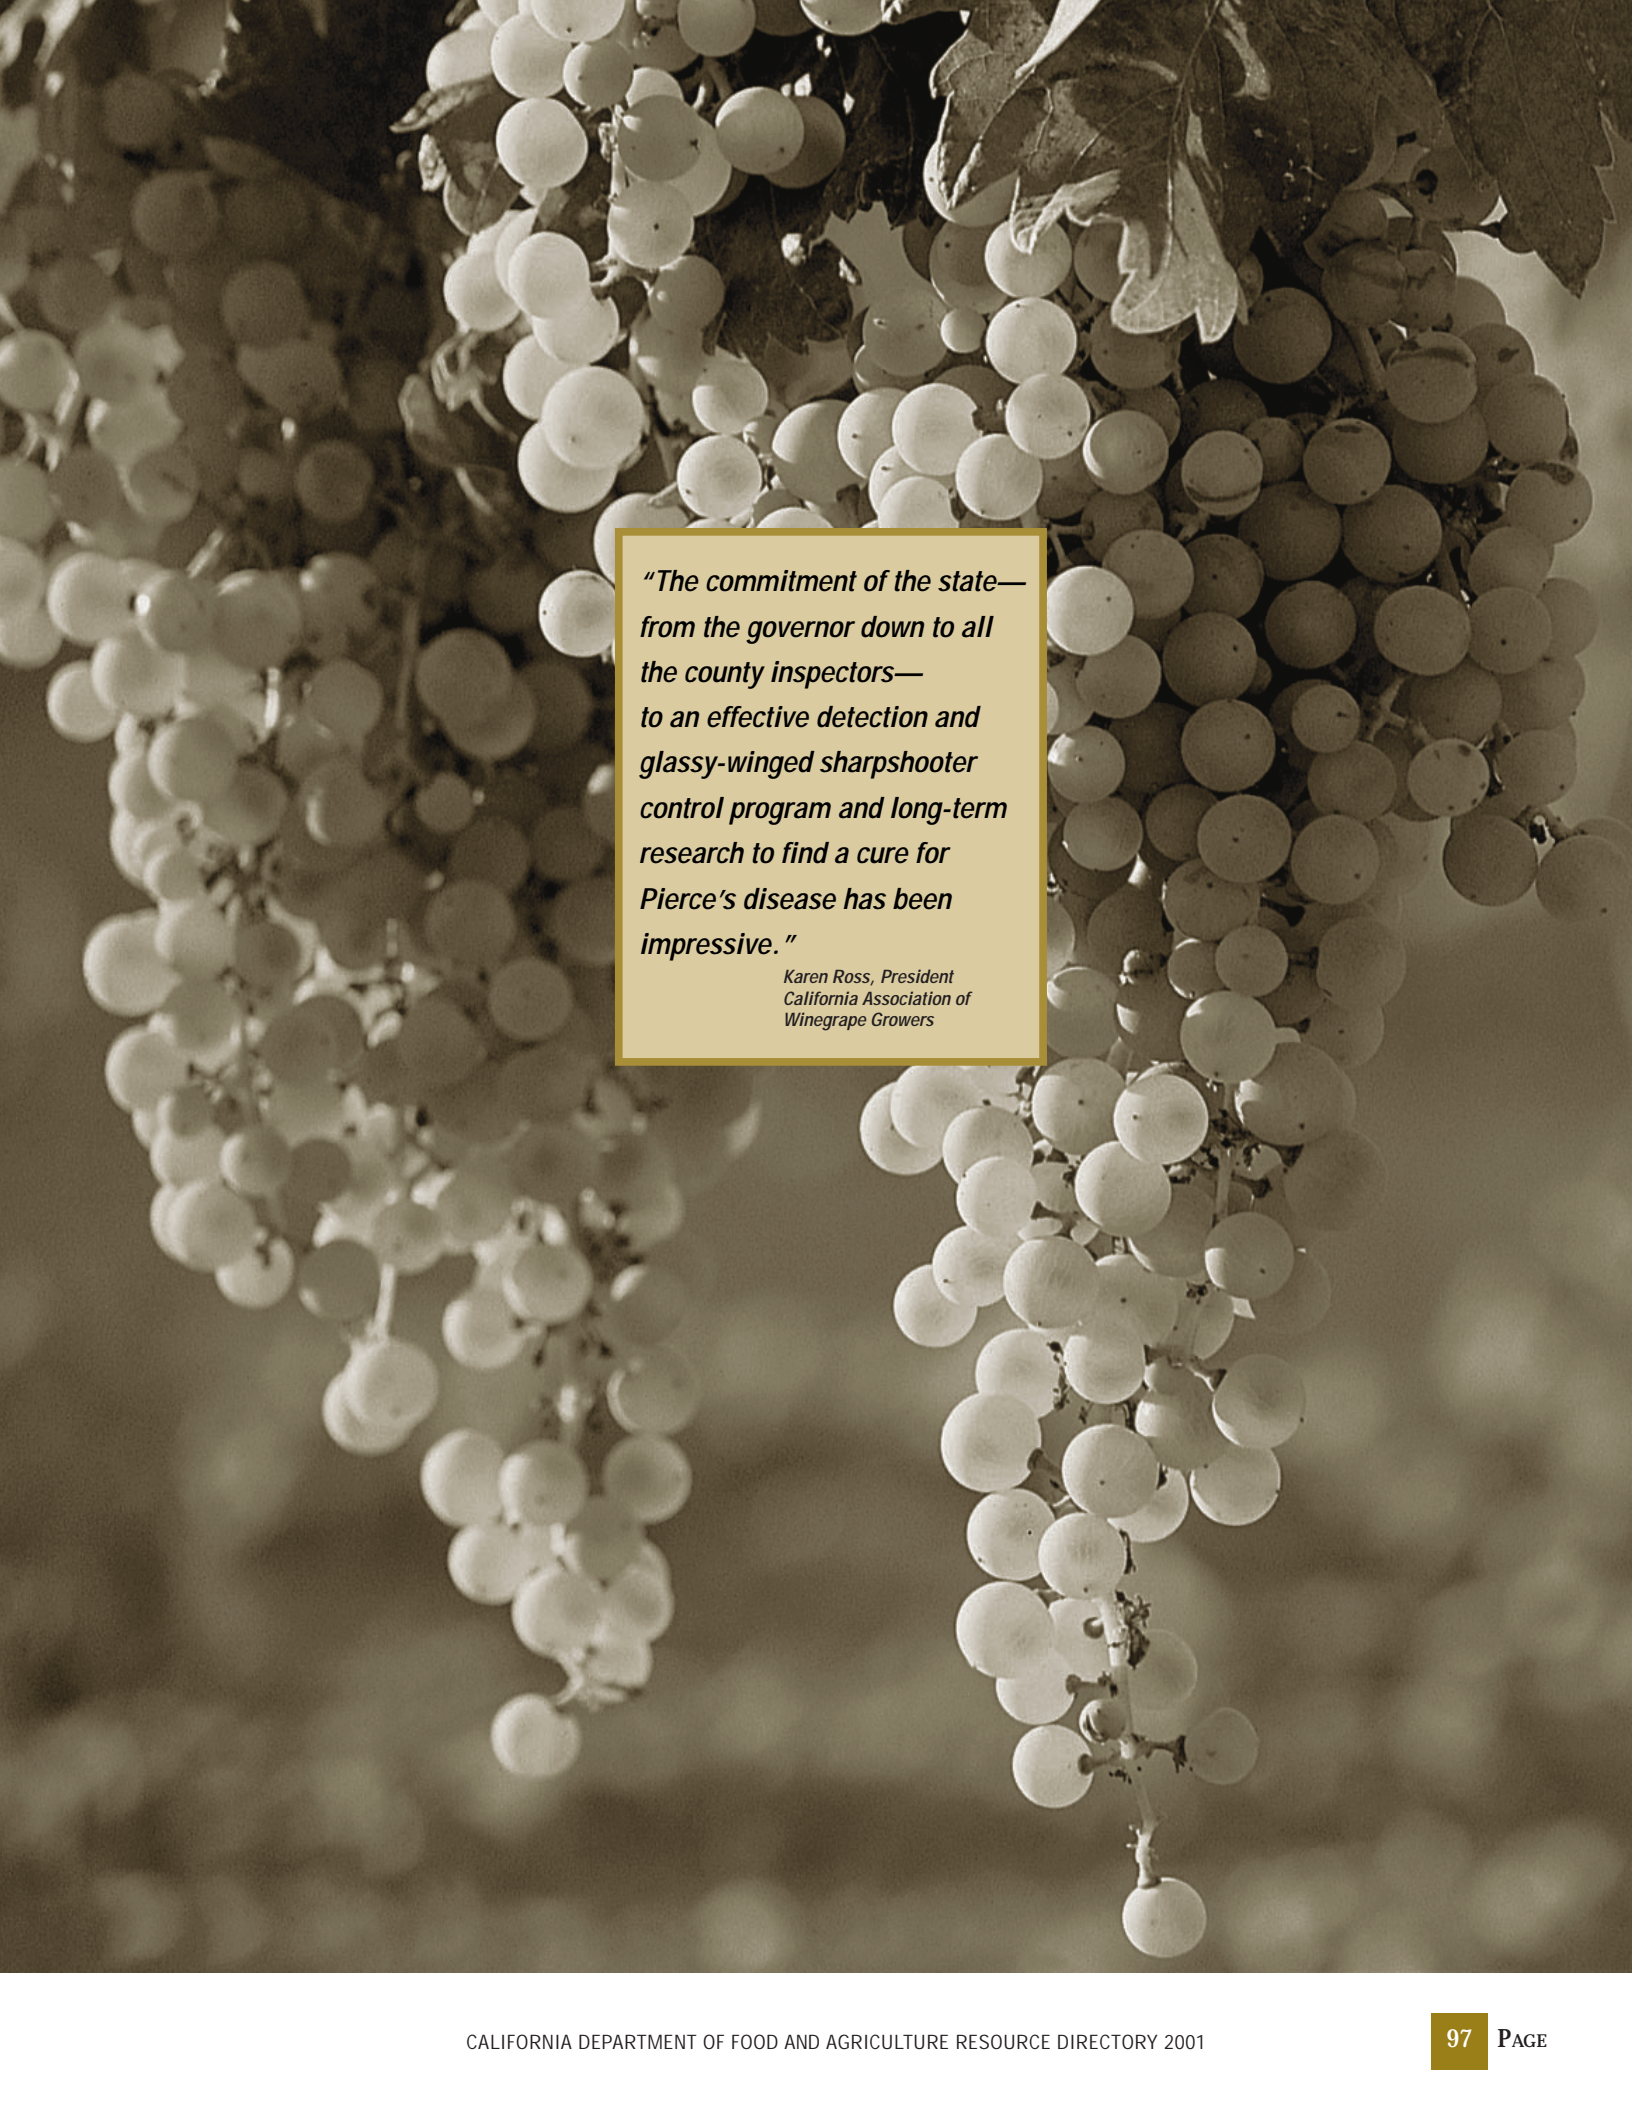

Of grapes grown statewide, the top five varieties receiving the highest average price were all wine grape varieties.

TOP FIVE VARIETIES RECEIVING THE HIGHEST AVERAGE PRICE PER TON:

Scheurebe	\$4,504.12 ¹
Pinot St. George	\$3,200.00 ¹
Freisa	\$2,554.63 ¹
Petite Verdot	\$2,064.41
Vernaccia	\$2,030.90 ¹

¹ These purchases involved less than 50 tons.

The 2000 Chardonnay price of \$895.07 was down 10 percent from 1999, and the 2000 Cabernet Sauvignon price of \$1,047.67 was down 1 percent. The 2000 average price for Zinfandel grapes decreased to \$464.15, representing a 6 percent decline from 1999.

*"The commitment of the state—
from the governor down to all
the county inspectors—
to an effective detection and
glassy-winged sharpshooter
control program and long-term
research to find a cure for
Pierce's disease has been
impressive."*

*Karen Ross, President
California Association of
Winegrape Growers*

¹ Other categories include minor and mixed varieties.

Grape Variety Synonyms

Beauty Seedless — Black Beauty
 Black Corinth — Zante Current
 Black Prince — Rose of Peru
 Burger — Monbadon
 Flame Seedless — Red Flame
 Gamay — Valdiguie
 Gray Riesling — Trousseau Gris
 Malaga — White Malaga
 Malvasia Bianca — Vennentino

Marechal Foch — Foch
 Mataro — Mourvedre
 Muscat Blanc — Muscat Canelli
 Olivette Blanche — Lady Finger
 Palomino — Golden Chasselas
 Pinot Gris — Pinot Grigio
 Red Crimson — Crimson Seedless
 Red Globe — Rose Ito
 Refosco — Mondeuse

Ruby Seedless — King Ruby
 Sangiovetto — Sangiovese — Brunello
 Sauvignon Vert — Muscadelle
 St. Emillion — Ugni Blanc — Trebbiano
 Sugraone — Superior Seedless
 Syrah — French Syrah — Shiraz
 Tempranillo — Valdepenas
 White Riesling — Johannisberg Riesling

LIVESTOCK AND DAIRY

The Golden State's dairy industry continued growing as new record highs were set for the number of milk cows and milk production. In 2000, California led the nation in total milk production with a record 32.2 billion pounds, representing a 6 percent increase from the previous year. The average number of cows in 2000 was 1.52 million, up 4 percent from 1999. Total milk value was \$3.70 billion, off 9 percent from the previous year. This decline is due to a 14 percent drop in the unit value, which went from \$13.45 to \$11.50 per hundredweight.

The five leading counties in milk production and number of milk cows were Tulare, Merced, San Bernardino, Stanislaus and Kings. Collectively, these counties accounted for approximately two-thirds of the state's milk production and milk cows.

Nationally, California ranked first in nonfat dry milk production, first in butter production, and second in cheese production. California produced 48 percent of the nation's nonfat dry milk, 28 percent of the butter, and 18 percent of the cheese. Cheddar and mozzarella cheeses constituted approximately three-fourths of the cheese production in California.

Livestock cash receipts during 2000 totaled \$6.27 billion, down 6 percent from 1999. Most of the decline in value was due to a 9 percent decrease in milk, cream and broilers, and a 10 percent drop in eggs.

Total production of the three red meat species (cattle, sheep and hogs) was 2.12 billion pounds, up fractionally from the 2.10 billion pounds of a year ago. Total marketings of the three red meat species also showed a slight increase, from 2.62 to 2.63 billion pounds. Cattle and calf marketings were 2.47 billion pounds, representing a 1 percent improvement. Sheep and lamb marketings of 77.3 million pounds were down 4 percent from 1999. Hogs and pig marketings declined 2 percent from the previous year to 79.9 million pounds.

Cattle and calves marketed from California feedlots totaled 608,000 head; this represents a 3 percent increase from 1999. Turkey production increased 2 percent to 439 million pounds in 2000. Egg production of 6.29 billion eggs was down 5 percent from the previous year. Honey production was 30.8 million pounds, marking a 2 percent increase from 1999. Wool production was 4.00 million pounds, up 10 percent from the previous year.

¹ Starting in 1993, the 100+ Head class was broken out into 100-199 Head and 200+ Head classes.

² Starting in 1997, the 200+ Head class was broken out into 200+ Head, 200-499 Head, and 500+ Head classes.

GRAZING FEE ANNUAL AVERAGE RATES, 1991-2000¹

Year	Per Animal Unit ²	Cow-Calf	Per Head
<i>Dollars Per Month</i>			
1991	9.61	11.63	12.37
1992	10.09	13.29	12.09
1993	10.40	13.30	11.20
1994	11.00	13.10	11.80
1995	10.50	12.80	11.10
1996	10.10	12.20	11.90
1997	10.60	13.00	12.00
1998	11.50	14.50	12.90
1999	12.10	15.00	12.50
2000	12.30	15.50	12.70

¹ The average rates are estimates (rates over \$10.00 are rounded to the nearest dime) based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Agricultural Survey.

² Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf *0.833)

VEGETABLES AND MELONS

California's diverse climate allows for year-round production of many vegetables, beginning in the desert during winter months and then heading into the coastal areas and Central Valley as the season progresses.

The Golden State produced 25.9 million tons of vegetables and melons in 2000, a 10 percent drop from 1999. However, California continues to lead the nation in vegetable and melon production, accounting for 38 percent of acreage harvested, 57 percent of production and 52 percent of the total value.

Total value of vegetable and melon production was \$6.64 billion. Although vegetable and melon production declined, the value of production jumped 7 percent from the previous year. Broccoli, cabbage, cauliflower, celery, lettuce, peppers, spinach, fresh market tomatoes and watermelons showed large increases in value. Notable decreases in value occurred in brussels sprouts, carrots, sweet corn, garlic and processing tomatoes.

California produces 95 percent of the processing tomatoes in the country, with most coming from the rich farmland in the Sacramento and San Joaquin valleys. The Golden State also accounts for more than 90 percent of the nation's production of artichokes, brussels sprouts and celery. Additionally, California is home to more than 75 percent of the national production of broccoli, cauliflower, fresh market carrots, garlic, honeydews, leaf lettuce and fresh market spinach. Monterey County is known worldwide for its abundant, high-quality vegetable crops, particularly artichokes, broccoli, cauliflower, celery and lettuce.

The production of several vegetable and melon crops declined last year after the very high production of 1999. The 2000 crop year was characterized with a fairly wet February and March, which caused some disruption in planting and slowed development of many vegetables. During April, warm weather enabled the crops to be planted and progress normally. The months of May, June and July had both below and above average

temperatures, but no real extremes. Most vegetable and melon crops developed normally and harvest proceeded on schedule. However, cool, wet weather in October and November slowed crop development and lowered the quality of several fall vegetables, particularly in the San Joaquin Valley. Good supplies still came from the Salinas Valley. Processing tomatoes had a record-high yield, but harvested acreage was down 18 percent and production was 16 percent below the previous year.

NOTABLE CHANGES IN VEGETABLE AND MELON PRODUCTION FROM 1999 TO 2000:

Beans, Snap	+13%
Brussels Sprouts	-19%
Cabbage	+27%
Corn, Sweet	-22%
Garlic	-10%
Melons, Honeydew	+13%
Peppers, Bell	+20%
Tomatoes, Processing	-16%

NOTE TO THE READER

Vegetable and melon estimates include commercial production, but exclude garden production and vegetables grown for seed. Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door. For fresh market sales, the price is on a packed and loaded basis, free on board (F.O.B.) shipping point. To avoid disclosure of individual plants, not all of California's data were published.

¹ The processed price is based on equivalent returns at the processing plant door. The fresh market price is on a packed and loaded basis, F.O.B. shipping point.

² Program initiated in 1992.

³ Starting in 1993, fresh market and processed acreage were published separately.

⁴ Program initiated in 2000.

⁵ Data not published for 1991.

⁶ Onion production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 1991 — 174,000 cwt.; 1992 — 275,000 cwt.; 1993 — 346,000 cwt.; 1994 — 266,000 cwt.; 1995 — 266,000 cwt.; 1996 — 292,000 cwt.; 1997 — 278,000 cwt.; and 1998-2000 — 250,000 cwt. Storage loss amounts are excluded when computing total value.

⁷ Includes fresh and processed.

⁸ Program initiated in 1998.

⁹ Miscellaneous vegetables and melons include green lima beans for processing, oriental vegetables, green peas, etc. New crops added in 1992 and 2000 are excluded from the 1992 to present miscellaneous totals.

AGRICULTURAL EXPORTS

California continues to set the pace for the rest of the nation by remaining the country's largest agricultural producer and exporter. It is the quality, freshness and unparalleled taste of California's food and agricultural products that drive this demand.

With more than 350 agricultural commodities, California's bounty can be found in markets around the world, from Europe to Asia and from Africa to Latin America.

California's agricultural export statistics were generated for the top 10 export destinations in 2000. Included within this profile is an abstract of California's agricultural exports to the European Union. In addition, California's top 49 agricultural commodities were traced to destinations around the world. To complete this profile, a listing of commodity export values and a table providing a comparison between production and export quantities is included. This statistical abstract provides an excellent overview of California's agriculture and its prominence in the international market.

The 2000 California agricultural export statistics reveal that total exports increased by an estimated 9 percent between 1999 and 2000. This increase can be attributed to a rebound in two of California's high value agricultural products: cotton and oranges. An increased crop yield in 2000 drove cotton supplies up, and orange production recovered from the devastating freeze of 1999. Cotton and orange products are important export commodities representing 13 percent of California's total agricultural export value. California's agricultural exports in 2000 increased an estimated \$573 million, of which \$320 million (or 55 percent) can be attributed to the increase in cotton and orange exports. In addition to increased crop supply, other factors influencing the increase include favorable growing conditions and an increase in international trade liberalization.

While California experienced an overall increase in agricultural exports for 2000, the state is still 5 percent below the 1997 export figure of \$6.9 billion. In 2000, California demonstrated some phenomenal export growth. For instance, California's fresh tomato exports experienced a 150 percent increase over the previous year, reaching a five-year high of \$115 million. Other commodities increasing in export value include beef, broccoli and celery. These three commodities, on average, experienced export growth of between 25 and 40 percent.

These agricultural export statistics demonstrate that California's farmers export an average of 18 percent of what they grow. While dependency on exports varies among commodities, California's farmers are increasingly affected by the global nature of agriculture.

The California Department of Food and Agriculture's Agricultural Export Program is mandated to assist California agriculture in market development and expand world trade to maximize growth in the state's economy.

AGRICULTURAL EXPORT STATISTICS: METHODOLOGY

California's agricultural export statistics are developed by the Agricultural Issues Center of the University of California at Davis in consultation with the California Department of Food and Agriculture. Data to compute agricultural exports are derived from official government sources, published industry sources, and unpublished information from government and industry.

United States' export quantities and values and California port export figures are from Department of Commerce trade data posted on the United States International Trade Commission online database (<http://dataweb.usitc.gov>). Canadian import data are from Statistics Canada online database (www.statcan.ca/start.html). Production quantities and values are from various National Agricultural Statistics Service and Economic Research Service publications.

For further information on the precise methodology employed by Daniel Sumner, Ph.D., Director, Agricultural Issues Center, contact the Agricultural Export Program at (916) 654-0389.

¹ Revised 1999 data.

² The methods used to determine exports for these commodities were updated in 2001 and applied to 2000 data and 1999 revised data.

³ "Total Other Products" is composed of (1) highly processed products that are difficult to attribute to a specific commodity, such as mixtures of fruits, nuts and vegetables and other processed foods (for example, candy bars); and (2) animal and plant products marketed in such small quantities that they are not included in the 50 leading commodities.

¹ Commodities with exports of more than \$2 million to each destination are listed in order of the value of shipments. This table provides the approximate exports to each of the top destinations for 34 California commodities with the largest total export values in 2000. Also included are 10 additional commodities for which California accounts for more than 85 percent of exports from the United States, or for which reliable export data was available. For each of the six commodities that are not included here, California accounts for less than 25 percent of exports from the United States, making it difficult to estimate export destinations with available data sources.

Weighted Average for the Top 50 Commodities				18

¹ This ratio is expressed as a percentage and is derived by dividing the farm quantity exported in 2000 by the farm quantity produced in 2000. The ratio does not necessarily represent the share of 2000 production that was exported, since much of the production of summer and fall harvested crops is often exported in the subsequent year, and conversely a sizeable share of current calendar-year exports were likely produced in the previous year.

¹ This table shows export destinations receiving at least 5 percent of total exports for the top 34 export commodities. This table also includes an additional 10 commodities for which California accounts for more than 85 percent of exports from the United States, or for which reliable export data was available. For each of the six commodities that are not included here, California accounts for less than 25 percent of exports from the United States, making it difficult to estimate export destinations with available data sources. For those commodities that California produces 85 percent or greater of exports from the United States, percentages were equal to national percentages in each country. For those commodities that California produces less than 85 percent of exports from the United States, the principle sources for destination percentages were California port data and Canadian import data. However, California port data may not accurately reflect export destinations for some products from California. In those cases, adjustments were made using industry information.

TOP 5 AGRICULTURAL EXPORT COUNTRY PROFILES

Country Profile: Canada

Canada remains California's leading agricultural export destination for the second consecutive year. In 2000, California exported more than \$1 billion in agricultural products to Canada, representing approximately 11 percent of the United States' total agricultural exports to the country. Total agricultural exports from the United States to Canada were valued at more than \$10 billion in 2000. This represents the highest agricultural export levels to Canada since 1970.

- Total agricultural exports from the United States to Canada have grown an average of 6 percent per year since 1997.
- Canada is the largest export destination for California's fruits and vegetables. In 2000, more than 70 percent of our celery, lettuce, carrots, melons and potato exports were destined for Canada.
- Table grapes, processed tomatoes and lettuce represent more than 28 percent of California's total agricultural exports to Canada.

CALIFORNIA AGRICULTURAL EXPORTS TO CANADA

Country Profile: Japan

Japan represents the second largest agricultural export destination for California, yet the country remains the largest export destination for total agricultural exports from the United States. In 2000, California exported more than \$1 billion in agricultural exports to Japan, representing a 1 percent decrease from the previous year. Total agricultural exports from the United States to Japan increased more than 2 percent in 2000.

- California's agricultural exports to Japan have decreased an average of 7 percent per year since 1997. This decrease can be associated with a stronger dollar and weakening Japanese economy.
- In 1996, total agricultural exports from the United States to Japan reached the highest levels since 1970. Currently total agricultural exports from the United States to Japan are less than \$12 billion; this level is 28 percent below the national record export value of \$16.6 billion.
- Rice and cotton lead California's agricultural exports to Japan, representing an estimated 22 percent of total agricultural exports to the country.

CALIFORNIA AGRICULTURAL EXPORTS TO JAPAN

Country Profile: Mexico

Mexico remains the third largest export destination for California agriculture. In 2000, California exported more than \$392 million in agricultural products to Mexico. Milk and cream is the leading export from California, representing \$135 million in sales. The leading agricultural export from the United States to Mexico is red meat (fresh, frozen and chilled) valued at \$876 million. Total California beef and related product exports are estimated at \$5 million.

- California's agricultural exports to Mexico have increased an average of 49 percent per year since 1997. In 2000, total agricultural exports from the United States to Mexico increased by 15 percent to more than \$7 billion.
- California represents an estimated 5 percent of total agricultural exports from the United States to Mexico.
- California's exports of milk and cream make up an estimated 39 percent of the state's total agricultural exports to Mexico. Other leading California commodities to Mexico include table grapes, fresh and processed tomatoes, almonds and pears.

CALIFORNIA AGRICULTURAL EXPORTS TO MEXICO

TOP 5 AGRICULTURAL EXPORT COUNTRY PROFILES *continued*

Country Profile: South Korea

In 2000, South Korea became the fourth largest export destination for California agriculture. California exported \$262 million in agricultural commodities, representing 8 percent of the national total. This tremendous rebound of California agricultural exports to South Korea is an estimated 47 percent increase over 1999.

- South Korea is the second largest destination for California beef and related products, representing an estimated 31 percent of total California beef and product exports.
- In 2000, total agricultural exports from the United States to South Korea were valued at nearly \$3 billion, representing an increase of 5 percent over the previous year.
- Leading California agricultural exports to South Korea include cotton, milk and cream and oranges.

CALIFORNIA AGRICULTURAL EXPORTS TO SOUTH KOREA

Country Profile: United Kingdom

The United Kingdom is California's fifth largest export market representing more than \$250 million in agricultural exports. California's agricultural exports to the United Kingdom make up an estimated 18 percent of the national total. In 2000, total agricultural exports from the United States to this country were valued at \$1.38 billion.

- California's agricultural exports to the United Kingdom remained relatively stable compared to the previous year. Total agricultural exports from the United States to the United Kingdom decreased more than 3 percent from 1999.
- The United Kingdom receives an estimated 27 percent of total California wine exports, making it the largest export destination for California wines.
- Dried fruit and nuts make up an estimated 24 percent of California's total agricultural exports to the United Kingdom.
